Acknowledgements

As a kid, living and working in a different country and being an independent person was just an ambitious dream. Now that I am writing this acknowledgement, I have lived in two different continents other than home and I have become a successful and independent woman. When I decided to move to Netherlands to pursue a PhD degree I had a lot of uncertainties about life in future. Now I can say with no doubt that decision has been by far the best decision I have ever made. The three years of living and working in Groningen will always remain to be one of the most special periods of my life and I would like to express my sincere gratitude to all the people who helped my dream come true with their support and love.

Prof. Robert J. Porte. Dear Robert, I could not have asked for a better mentor. Thank you for being so enthusiastic about research and being so involved with all the experiments. I have learned from you how to do proper research by paying attention to all the details. Thanks for giving me the opportunities of attending many national and international conferences. Thank you for seeing and trusting my potentials. It was a great honor when you let me attend the Novel Technologies for Organ Transplantation (NTOT) meeting in London, 2014 on your behalf to present our research to all the chief transplant surgeons throughout United Kingdom.

Prof. Ton Lisman. Dear Ton, thank you for welcoming me so warmly on my first day in Groningen and encouraging me to take my time to settle down and feel comfortable in the new city. Your scientific tips on how to do experiments and how to write scientifically have been very useful. I found the courage to write my first ever fellowship grant application only after you guided me through it. The fellowship was awarded, which opened many more doors in my career. Thank you!

I would like to thank Prof. A.J. Moshage, Prof. J.N.M. IJzermans and Prof. A. Masclee for revising my thesis as the members of the reading committee. Dear Han, even though I never directly worked with you I have always known you trusted my potentials the same way you trusted my sister Golnar. Thank you for supporting me from behind the scenes when I was looking for a PhD position in UMCG. I hope I have fulfilled your trust.

Dr. Wayel H. Abdulahad. Dear Wayel, when I started working on chapter 5 of my thesis I didnt have much immunology knowledge. I feel very lucky that I had you as my teacher.
Thanks for being so patient and for teaching me whatever I know about the immune cells. Thanks for staying in the lab for long hours to help me with the flowcytometry experiments and analyzing data. I wish you the best of luck and happiness in your life.

I would like to thank my colleagues in the lab, Sanna Op den Dries, Michael E. Sutton, Andrie C. Westerkamp, Pepijn Weeder, Alix Matton, Laura Burlage, Rianne Van Rijn. All the long hours of working in the lab and the operation room have been full of joy and good memories. It was because of such great collaborative team that the machine perfusion studies had so much success. Dear Pepijn, even though each period that we worked together was very short but I enjoyed them to the most. You are very smart and I learned from you to think out of the box. I am sure you will make a brilliant doctor and you will do important things in your life. Dear Alix and Laura, it has always been fun working with you. I am looking forward to our work together in Boston.

Sanna Op den Dries. Dear Sanna, you are not only my colleague whom I learned a lot from but also a great friend! We have had so many adventures together and laughed a lot together. You are very kind and have a warm heart. Every little adventurous trip that we went on together has become a great memory. Thanks for helping me integrate into the Dutch culture and welcome me so well. Also, I want to thank your family, Martha Op den Dries, Gert Op den Dries and Jorrit Jan Op den Dries for welcoming me into the family on many occasions. Dear Hamish McCarroll, thank you for making me smile every time we met and specially thank you for saving me from the ice-cold water! I wish you and Sanna the best of luck and happiness wherever in the world you decide to take on an adventure.

I would like to thank all the fellow PhD students in the Surgical Research Lab, Edris Alkozai, Marc Kirschbaum, Rolando Rebolledo, Welmoet Westendorp, Maximilia Hottenrott and Ilsalien Baker for making the lab and offices in the Triade Gebouw a joyful place to work in. I would also like to thank the researchers and technicians, Dr. Henri Leuvenink. Janneke Wiersema-Buist, Petra Ottens, Jacco Zwaagstra, Rozemarijn Kox, Douwe Samplonius, Susanne Veldhuis and Jelle Adelmeijer for all their great work in running the lab as a very organized working space. Dear Petra and Susanne, thanks for taking over all the rodent surgeries. Dear Janneke and Jelle, thanks for helping me with all the bench top assays. Dear Henri, thanks for sharing your knowledge and expertise of machine perfusion during the studies of my PhD.

Dear Prof. Dr. Annette S.H. Gouw, thanks for sharing your knowledge of liver pathology during the various studies of this thesis. Thanks to Jeroen Kuipers, expert in electron microscopy, for teaching me what I needed to know to prepare my samples and perform electron microscopy. Dear Dr. Maarten W.N. Nijsten, thanks for being an enthusiastic teacher and for sharing your knowledge of acute care for liver with me during the liver machine perfusion studies.

I would like to thank the staff of the Central Dienst Proefdieren (CDP), Michel Weij, Arie
Nijmeijer, Ar Jansen, Natascha Broersma, Annemeike Smit-van Oosten and the animal welfare officer, Catriene Thuring for your help during the animal studies of this thesis.

I would like to thank the Dutch Transplantation Coordinator team, specially Ernst Buiter, Cees Brugman, Sijrk Forma, Teun Bezema, Miranda Danhof-Dalmolen, Marjolein Leemkuil and Rianne van Rijn. Without your help the human machine perfusion studies would not be possible. Thanks for always being available and helpful and for keeping a smiley face at any time of day or night.  

I would like to thank the team of transplantation surgeons and fellows, Dr. Ger Sieders, Dr. Marieke de Boer, Dr. Paul Peters, Dr. Ruben de Kleine, Dr. Sander Ijtsma, Dr. Ewen Harrison and the staff and nurses of operation room in UMCG for their help during the human machine perfusion studies. Thanks to Rolf Buining, Sanquin Blood Bank, for providing the blood products for the machine perfusion studies.

I wrote a major part of my thesis in Boston while I had already started working as a post-doctoral research fellow in Massachusetts General Hospital/Harvard Medical School, Boston, USA. I would like to thank Dr. Korkut Uygun, Dr. Heidi Yeh and Prof. James F. Markmann for trusting me and giving me this great opportunity. Dear Korkut, I cannot thank you enough for being so patient with me and letting me work on my PhD thesis besides working in your lab.

During all the machine perfusion studies in thesis I have used Liver Assist as the perfusion device. I would like to thank the all the people who work in Organ Assist, especially Martin Kuizenga, Arjan van der Plaats, Ron Leuvenink, Melchior van Voorden, Leoni Venema and Wilfred den Hartog for all the help and support during the studies. Thanks for always being available whenever we needed help. I am very happy that I am continuing my collaboration with you also during my studies in Boston.

Freeha Arshad. Dear Freeha, you are a brilliant, brave and independent person. We have had long conversations about culture, politics, life and family; and I have enjoyed every minute of them. Thanks for all the encouragements. Jogging, cooking and going to trips with you has been full of laughter and joy. I respect you a lot for all the humanitarian work you do and I wish you the best of luck in every step of your life and career.

Paria Mahboub. Dear Paria, even though I got to know you only after a few months of working on the lab bench next to you I feel I have known you for years. I never forget our IKEA adventure in the middle of snow storm! Thanks for all the hidden snacks! But most importantly thanks for listening to me whenever I needed it and thanks for all the giggling in the lab during our experiments. You are a fighter and no matter what obstacle comes in your way you get through it and move forward. I am very glad you are near me once again in Boston. You know that not only I but also Roxy love you!

Azadeh Zaferani and Atze van der Pol. Dear Azi and Atze, I would like to thank you for being
great friends. Azi joon, my first birthday in Groningen is the one night I wont forget and its all because of you and Golnar. I am very happy for you and Atze for being proud parents of little Alma Bahar. I wish you happiness and success in life.

I am grateful to my friends who kept supporting me and made me smile no matter what. Farbod and Sharwin, my two dear friends! Distance has never mattered in our friendship. The nights of Tehran and Germany and Netherlands are full of happy memories because of you. Anahita and Bita, you are not only my cousins but also very close friends. The nights of Tehran are engraved in my mind forever. Bita joonam, I could never imagine I would see you in Boston once again crossing our paths. Life has a funny game and I like it!

Cesare Cascella. Dear Cesare, I am glad we met. Dancing, cooking and laughing has been a lot of joy. Thanks for helping me with the layout of this thesis and designing the cover of this book. Regardless of the unknown future I hope we continue our friendship for a long time.

Giuseppe Cimo. Dear Peppe, I feel so lucky Golnar met you! Having you as a part of my family and as my friend is indescribable. Travelling in Europe with you and Golnar and taking on adventures has created great memories. Thanks for all the laughter. Thanks for sharing your knowledge of books, travelling and photography and thanks for all the great conversations.

Saber Ghadakzadeh. Dear Saber, I have known you for so many years now which have been full of ups and downs in our lives. I have learned from you to be ambitious and never be afraid of asking for what I want and never stop trying to achieve my goal. Thank you for always having a new idea when I think there is no way I can make something happen. I am sure you will succeed in any step you take in your life and I keep learning from you.

I would like to dedicate a very special part of my acknowledgement to the dearest people in my life, my parents and my two sisters, Golnar and Negar. Without their unconditional love and support I would never be the person who I am today. I am thankful to everything they have done and are still doing for me. I am grateful to my father for working so many long hours in a far town so I can get the higher education I wanted. I am thankful to my mother for staying up all those night to support me studying and for driving me to all the classes throughout the city in the dark nights of winter. When I left Iran to start my PhD, my parents had spent all their savings for releasing my medical diploma. Mom and Dad, I know I can never fully return what I owe you in love and life but I hope your little girl can at least return a part of your love by fulfilling this PhD.

Dear Negar, you are the kindest person on the planet and the funniest one! We have done so many things together since we were little girls, from you teaching me how to read and write when I was 5 years old to when you accidentally (!) threw all those pins on the floor of our bedroom and so many other things. The most important thing is that every time I think about you I have a big smile on my face. I have learned from you to be kind and smile no matter
what. Thank you for being such a delight in my life and to make me smile every time I felt
down when facing obstacles. I wish that you keep smiling and make the world smile back.

Dear Golnar, what make life in Groningen so special is because it was the place where
brought us so close to each other. You are not only my older sister to whom I look up to
but also my best friend. Thank you for being the one person I can always go to and talk to
and feel completely understood. Days of walking on the streets of Paris and nights of drinking
margaritas in Crete are unforgettable. And now you have become a great mommy of Marco
and I couldnt be happier for you. Thank you for being you! I wish you success in whatever
step you take that you think makes you happy.
Biography

Negin Karimian was born in Shiraz, Iran, in 1986. At the age of 14, she attended the National Organization for Development of Exceptional Talents (NODET) where she studied natural sciences. At the age of 18, she was accepted in Tehran University of Medical Sciences (TUMS) to study medicine. Negin graduated as a licensed medical doctor in November 2011. Shortly after in January 2012, she moved to the Netherlands to start her PhD studies in University Medical Center Groningen (UMCG) at the Department of Hepatobiliary Surgery and Liver Transplantation under supervision of Prof. Robert J. Porte and Prof. Ton Lisman. Her research was focused on the mechanisms of bile duct injuries and the protective role of oxygenated machine perfusion in liver transplantation. Currently, she is pursuing her research to improve global organ sharing as a postdoctoral research fellow at the Division of Transplantation, Department of Surgery and the Center for Engineering in Medicine at the Massachusetts General Hospital, Harvard Medical School, Boston, USA. Negin enjoys performance art and plays musical instruments in her spare time. She also likes travelling, reading and photography.
