States parties to international copyright instruments are required to give effect to their obligations under international copyright law and fulfil their international human rights obligations with respect to striking a balance between the human rights of the authors of intellectual works and human rights of the users of those same works. The High Commissioner of Human Rights has concluded that such balance ‘is one familiar to intellectual property law’. This conclusion assumes that international copyright law is already compliant with international human rights law. However, international copyright law instruments are not clear about how to reach an appropriate balance between these rights and, as a result, different stakeholders in the international copyright community seek and defend varied versions of balance which are not necessarily consistent. Concurrently, international human rights law bodies and scholars have examined the human rights of authors and users of intellectual works through a copyright law lens, missing a chance to articulate a clear human rights principle of balance. A proper human rights balance between authors’ and users’ human rights recognises the limited nature of both sets of human rights, rejects any hierarchy between them, and interprets them in conformity with the notion of the interdependence and indivisibility of human rights.

Keywords: Human Rights; Intellectual Property; Copyright; TRIPS; Compliance

I. Introduction

International human rights law has specific requirements for the protection of authors and users of intellectual works. Article 27 of the Universal Declaration of Human Rights (UDHR)\(^1\) and Article 15(1) of the International Covenant on Economic, Social and Cultural Rights (ICESCR)\(^2\) protect ‘the moral and material interests’\(^3\) of authors (hereinafter authors’ moral and material interests) and the human rights of individuals to ‘participate in the cultural life of the community, to enjoy the arts and to share in scientific advancement and its benefits’\(^4\) (hereinafter users’ rights in culture, arts and science). Furthermore, by virtue of the interdependence and indivisibility of human rights,\(^5\) authors can derive protection from other human rights and freedoms, such as the right to freedom of expression and the right to property.\(^6\) Likewise, users can support

---

\(^1\) Universal Declaration of Human Rights (adopted 10 December 1948 UNGA Res 217 A(III) (UDHR).

\(^3\) UDHR, art 27(2); ICESCR, art 15(1)(c).

\(^4\) UDHR, art 27(1); ICESCR, art 15(1)(a)(b).

\(^6\) Hereinafter, authors’ moral and material interests in Article 27(2) of the UDHR and in Article 15(1)(c) of the ICESCR as well as authors’ claims to protect these interests under the human rights to freedom of expression and property are collectively referred to as ‘authors’ human rights’. For a discussion of the content of authors’ rights in international human rights law, see United Nations (UN) Committee on Economic, Social and Cultural Rights (CESCR), ‘General Comment No. 17 (2005): The Right of Everyone to Benefit from the Protection of the Moral and Material Interests Resulting from any Scientific, Literary or Artistic Production of which
their rights to access, use and share intellectual works by relying on their freedom of expression and their human right to education.7

Given the indivisibility and interdependence of human rights, the human rights of authors and users are presumed to be compatible as codified in international human rights instruments. Nonetheless, the practice of these rights by individuals, their implementation by parliaments, and/or their adjudication by courts may result in one (or more) of these rights intruding on the other(s). In this case, international human rights law posits balance as the solution for managing the relationship between authors’ and users’ human rights, and between these two sets of rights and the whole body of international human rights. In General Comment No. 17, the Committee on Economic, Social and Cultural Rights (CESCR) has explained that authors’ international human rights ‘must be balanced’ with the other international human rights recognised in the ICESCR, including users’ international human rights.8 Also, the High Commissioner of Human Rights has relied on the temporary nature of intellectual property rights and their traditional utilitarian justifications to conclude that the balance that international human rights law strikes ‘between public and private interests’9 in intellectual works is ‘one familiar to intellectual property law’10 and thus ‘there is a degree of compatibility between Article 15 [of the ICESCR] and traditional [intellectual property] systems’.11 The High Commissioner has emphasised the role that balance, as an objective of the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS), plays in establishing a ‘potential link’12 between TRIPS and international human rights law.13 Yet, the High Commissioner has also identified a number of points in TRIPS that are a source of concern from an international human rights law perspective.14

The High Commissioner’s reliance on the international copyright law’s principle of balance to issue a decree of coexistence between international copyright law and international human rights law is problematic. The principle of balance in international copyright law is not as self-evident as generally perceived. It is ambiguous and is far from being agreed upon as satisfactory within international copyright law, making it a poor candidate to be imported as a viable peacemaker between the two regimes. Second, the High Commissioner has not articulated an independent human rights principle of balance—with clear rules—that can contribute to managing the multifaceted and interrelated tensions resulting from the interplay between authors’ and users’ human rights and which can act as point of reference against which international copyright law can measure its compliance with international human rights norms.

The purpose of this paper is to unfold the complexity surrounding the meaning of balance in international copyright law and present the principle of balance in international human rights law. This should inform a new debate with respect to how to measure the compliance of international copyright law with international

human rights law. The paper is divided into five parts: Part II outlines the different human rights approaches to intellectual property law; Part III reveals the ambiguity of the principle of balance in international copyright law; Part IV presents the human rights principle of balance; and Part V is a conclusion.

II. International Human Rights and Intellectual Property: The Rhetoric on Conflict and Coexistence

The relationship between international human rights law and international intellectual property law is complex, and for a long time both legal communities paid little attention to this complexity. Thus, in 1998, the World Intellectual Property Organization (WIPO), in collaboration with the United Nations (UN) Office of the High Commissioner for Human Rights (OHCHR), organised a ‘Panel Discussion on Intellectual Property and Human Rights’. The handful of papers presented in the panel generated a new stream of research looking into international intellectual property law through an international human rights lens.

The early theme of research on the relationship between intellectual property and human rights focused on finding whether the two systems are conflicting or coexisting. Specifically, Resolution 2000/7 declared that an apparent conflict exists between intellectual property and human rights: international intellectual property law, as embodied in TRIPS, ‘does not adequately reflect the fundamental nature and indivisibility of all human rights, including the right of everyone to enjoy the benefits of scientific progress and its applications, the right to health, the right to food and the right to self-determination’. Given this incompatibility, the Sub-Commission for the Promotion and Protection of Human Rights reminded governments of ‘the primacy of human rights obligations over economic policies and agreements’. The catalyst for Resolution 2000/7 was a joint statement by the Habitat International Coalition and the Lutheran World Federation, which urged the Sub-Commission to ‘take concrete actions on TRIPS’, whereby the Commission ‘must reassert the primacy of human rights obligations over the commercial and profit-driven motives upon which agreements such as TRIPS are based’.

Furthermore, several early scholars’ arguments supported the conclusions of Resolution 2000/7. For example, scholars argue that: international intellectual property protection is generally conflicting with the human right to development; the strong patent protection over genetically modified crops could undermine the human right to food; international patent protection hinders access to medicine and thus is

23 ibid para 3.
26 ibid.
injurious to the human right to health; international copyright and patent laws overlook the human rights of indigenous people over their traditional knowledge; and copyright law is in conflict with the human right to freedom of expression and the human right to education.

On the other hand, the second view on the relationship between international human rights and international intellectual property law spots a 'degree of compatibility' between the two regimes. According to the High Commissioner for Human Rights, this compatibility is ascribed to the similarity of the balance that both systems pursue between the private interests in protecting intellectual works and the public interest in providing access to those works. Particularly, in the context of copyright, this balance means giving authors exclusive rights over their intellectual works while simultaneously creating set of exceptions and limitations which enable the public to access those works. For example, copyright exceptions and limitations under international copyright law, such as the quotation exception and the expression/idea dichotomy, challenge the claim that a conflict exists between copyright and freedom of expression. Similarly, in international patent and trademarks laws, exceptions and limitations to exclusive rights give rise to the claim that the two regimes are compliant with international human rights law.

The coexistence perspective on intellectual property law and human rights assumes that the principle of balance in international copyright law is clear and imports it to manage the tension between authors' and users' human rights. However, given the plethora of meanings of the term balance in international copyright law, this perspective overestimates the maturity of the principle of balance in international copyright law and therefore also overestimates its possible role in international human rights law.

III. Balance in International Copyright Law: The Controversy
One of the reasons for the inherent tension between the protection of authors' and users' rights in international copyright law is the absence of an overarching purpose in reconciling both interests. National copyright laws have mainly emerged from either the common law tradition of copyright or the civil law system of 'droit d'auteur'. While the first is utilitarian in nature, as it envisages copyright as a mechanism
to stimulate copyright holders to produce and disseminate works for the benefit of the public interest, the second sees copyright as the authors' natural right.\footnote{\textit{ibid.}}

In 1886, the founders of the Berne Convention for the Protection of Literary and Artistic Works (Berne Convention)\footnote{\textit{ibid.}} opted for the natural law argument as a basis for international copyright protection.\footnote{The declared purpose of the Berne Convention was the 'protection of the rights of authors in their literary and artistic works'.\footnote{\textit{ibid.}} However, TRIPS brought a bundle of new objectives and principles to international copyright law. The protection and enforcement of intellectual property rights in TRIPS target the advancement of 'technological innovation', the 'transfer and dissemination of technology', the benefit of both 'producers and users' and the 'balance of rights and obligations'.\footnote{\textit{ibid.}} Subsequent international copyright instruments also refer to balance. The WIPO Copyright Treaty (WCT)\footnote{\textit{ibid.}} and the WIPO Performances and Phonograms Treaty (WPPT)\footnote{\textit{ibid.}} acknowledge 'the need to maintain a balance between the rights of authors [and the rights of performers and producers of phonograms] and the larger public interest, particularly education, research and access to information [...].\footnote{\textit{ibid.}} The Anti-Counterfeiting Trade Agreement (ACTA)\footnote{\textit{ibid.}} adopts, \textit{mutatis mutandis}, the objectives and principles of TRIPS including the objective of balance.\footnote{\textit{ibid.}}

The Oxford dictionary defines the noun 'balance' as 'a situation in which different elements are equal or in the correct proportions'\footnote{\textit{ibid.}} and defines the verb 'balance' as 'to offset or compare the value of (one thing) with another'.\footnote{\textit{ibid.}} Early on, Lord Mansfield envisaged these meanings as both a function and a purpose of copyright law when he stated:

'We must take care to guard against two extremes equally prejudicial; the one, that men of ability, who have employed their time for the service of the community, may not be deprived of their just merits, and the reward of their ingenuity and labour; the other, that the world may not be deprived of improvements, nor the progress of the art be retarded.'\footnote{\textit{ibid.}}

At first glance, balance resembles a traditional fair and desired allocation of the rights and freedoms of both authors and users over intellectual works.\footnote{\textit{ibid.}} It is supposed to be the ideal point at which neither users' enjoyment of intellectual works discourages authors from creation, nor authors' exclusive rights hinder that enjoyment.\footnote{\textit{ibid.}} This includes the users' ability to utilise available intellectual works to produce additional new works.\footnote{\textit{ibid.}}
Users have traditionally relied upon this balance to claim rights over intellectual works, and both lawmakers and courts have occasionally entertained these rights by relying on the normative support of the term balance. Therefore, the reference to balance in TRIPS has denoted a shift of international copyright law from being solely the law of authors into being the law of both authors and users.

Balance is now a cornerstone concept in the dialogue surrounding international copyright law and policy. However, TRIPS, the WCT, the WPPT and ACTA do not provide a unified definition of balance and the World Trade Organization (WTO) case law has not played the needed role to clarify the meaning of balance or how balance may be achieved. The Appellate Body in Canada—Term of Patent Protection emphasised that Article 7 and Article 8 of TRIPS still await appropriate interpretation. Yet, in Canada—Patent Protection of Pharmaceutical Products the panel briefly identified two types of balance in TRIPS. The first type of balance exists in the bundle of the rights and obligations in TRIPS’s provisions resulting from the deal struck by its negotiations, such as in Article 28, specifying the rights conferred by a patent. The second type of balance results from Member States’ implementation of TRIPS’s provisions by utilising its flexibilities to an extent that does not renegotiate the first mentioned balance. In this case, the challenged flexibility was the proper interpretation of the scope of Article 30 of TRIPS, which allows introducing exceptions to patent protection ‘provided that such exceptions do not unreasonably conflict with a normal exploitation of the patent and do not unreasonably prejudice the legitimate interests of the patent owner, taking account of the legitimate interests of third parties’.

In scholarship, there is a controversy over balance’s meaning and role in international copyright law. One view denies balance’s existence and role as a model to manage authors’ rights and users’ rights in international copyright law due to the power inequality between copyright holders in the developed world and users in the less-developed world. On the other hand, there is widespread acknowledgement of the importance of balance in international copyright law despite its complexity. Yet, the amount of balance required is not self-evident and needs identification in international copyright law. In this regard, Professor Daniel Gervais argues that a number of balances need to be struck not only within the international copyright law regime but also within a ‘copyright whole’. The copyright whole would include balancing between copyright rights and other rights with which it is ‘sparring’ and which are regulated by other areas of the law, such as the right of free expression, the right to privacy, the right to access to knowledge and the right to development. For

66 See eg William M Landes and Richard A Posner, ‘An Economic Analysis of Copyright Law’ (1989) 18 J Legal Stud 325, 326 (arguing that striking the correct balance between the incentive given to authors to produce (and disseminate) intellectual works and the value of affording access to these works is the core problem in copyright law); Pascal Lamy, ‘Speech’ (International Conference on the 10th Anniversary of the WTO TRIPS, Brussels, 24 June 2004) (arguing that achieving balance is the core of international copyright policy); Graeme Dinwoodie, ‘The WIPO Copyright Treaty: A Transition to the Future of International Copyright Lawmaking?’ (2010) 57 Case W Res L Rev 751, 757–758 (arguing that ‘balance is a more complex organism than we might expect or might assume’).

68 Ibid.
Professor Graeme Dinwoodie, however, believes that balance in international copyright law is the preservation of States' autonomy in designing their national copyright regimes in light of their socio-economic objectives and the minimum standards of protection required by international copyright law. This form of balance is not satisfactory for public domain advocates who argue that TRIPS's exceptions and limitations—the flexibilities which are supposed to preserve States' autonomy in devising balanced copyright norms—are not of the same type of exceptions and limitations known in common-law copyright regimes, such as fair use. Thus, these flexibilities are incapable of enabling balanced copyright protection. In contrast, Professor Jane Ginsburg is critical of the latter's view because it gives the concept of balance the form of 'cutting back on exclusive rights' or emphasising 'users' rights'. She criticises the European Copyright Code on this ground and argues that the traditional split between the civil law and common law copyright traditions have been replaced with 'the tension between authors' rights and user rights, with the latter orientation appearing to prevail.'

In light of the controversy over the meaning of balance in international copyright law, various stakeholders identify and defend varied versions of balance which not necessarily consistent. For example, States interested in strong copyright (or the so-called maximalists) have argued that strong copyright protection for authors, especially in the digital environment, is important to create balance in international copyright law. On the other hand, some developing countries and public domain advocates (collectively referred to as the Access to Knowledge (A2K) Movement) have complained that the maximalists are shifting international copyright law away from the proper balance, which implies the advent of a new enclosure movement to lock down culture. Therefore, they have called for balancing international copyright protection and enforcement against users' rights to use intellectual works. At the same time, they have opposed any new international norms that may strengthen copyright protection and enforcement. For example, in an intervention made in the WTO TRIPS Council with respect to ACTA, China's representative has argued that 'TRIPS-plus enforcement trends in RTAs [regional trade agreements], FTAs [free trade agreements] and ACTA would reduce the balance of interests that the TRIPS Agreement had tried to establish.' Similarly, India's representative has warned that ACTA's rules have the potential to 'completely upset the balance of rights and obligations of the TRIPS Agreement.'

Despite the controversy surrounding balance in international copyright law, the meaning of balance has shaped the framework invoked in international human rights law to manage the tensions between authors'

74 ibid para 273.
and users’ human rights or between these human rights and other interests. Historically, the drafters of the UDHR and ICESCR looked at authors’ and users’ human rights through a copyright lens. Advocates of a provision on authors’ moral and material interests in the UDHR and ICESCR advanced a natural law argument similar to that usually invoked to justify copyright. During the drafting of the UDHR, René Cassin, the representative of France, sought to provide authors of literary, artistic and scientific works with a ‘just remuneration for their labour’ and a ‘moral right’ that safeguards the integrity of their intellectual works even after the expiry of the works’ term of protection and their fall into the public domain.83

Similar to the drafting history of the UDHR, the proposal for a provision on authors’ moral and material interests in the ICESCR was influenced by the Lockean and personality views of copyright. For example, Jacques Havet, the representative of the UNESCO, in his proposal of the initial text of Article 15(1)(c) of the ICESCR, argued that the protection of authors’ moral and material interests ‘represented a safeguard and an encouragement for those who were constantly enriching the cultural heritage of mankind’84 and that ‘[o]nly by such means could international cultural exchanges be fully developed’.85

In fact, the supporters of a provision on authors’ interests intended to provide authors’ interests with stronger protection than previously existing international copyright law. They envisaged a regime that grants authors stronger control over their intellectual works—similar to the control of owners of tangible property—provides a stronger international enforcement of copyright than the Berne Convention; and goes beyond the minimum protection levels of the Berne Convention and the Universal Copyright Convention (UCC). For example, Argentina, Venezuela, Peru, Brazil and Ecuador endorsed the second paragraph of Article 27 of the UDHR because they perceived it as a move toward internationalising copyright law.86

Taking a similar position, but on different grounds, Campos Ortiz, the Mexican representative, responded to those who had argued that authors’ rights were adequately protected by national and international copyright law regimes by stating that ‘the effectiveness of such protection was at best relative and often non-existent; [therefore,] the United Nations should put its moral authority behind protecting all forms of work, manual as well as intellectual’.87 For him, this meant that the UN should put more effort into the protection of ‘intellectual production on an equal basis with material property’.88 This view perceives authors’ moral and material interests in international human rights law as a tool to strengthen authors’ protection in international copyright law, rather than as a new set of human rights. This goal was also present during the drafting of Article 15(1)(c). For example, the representative of Uruguay cited the lack of the international protection of authors’ rights and the prevalence of piracy as amongst the reasons supporting his proposal for a provision on the protection of authors’ moral and material interests.89

More recently, the CESCR has taken a copyright approach in its interpretation of the content of the authors’ moral interests, which is an essential component of any balance to be struck between the authors’ and the users’ human rights. Following in the footsteps of Article 6bis(1) of the Berne Convention,90 the CESCR has identified the rights of attribution and integrity as the authors’ moral interests.91 However, in addition to these rights, authors should also be entitled to: decide whether they want to disclose their expressions; stop these expressions from circulation when they wish; and to make whatever modifications necessary for maintaining the integrity of their works. Such rights derive support from the same justification

---

90 Berne Convention art 6bis(1):

  Independently of the author’s economic rights, and even after the transfer of the said rights, the author shall have the right to claim authorship of the work and to object to any distortion, mutilation or other modification of, or other derogatory action in relation to, the said work, which would be prejudicial to his honor or reputation.
91 General Comment No. 17 (n 6) para 13.
of authors’ rights of attribution and integrity, namely the protection of the author’s personality reflected in the intellectual work.\textsuperscript{92}

Furthermore, the High Commissioner for Human Rights concluded that a ‘degree of compatibility’ exists between international human rights and international intellectual property law due to the similarity of the balance that both systems pursue between the private interests in protecting intellectual works and the public interest in providing access to those works.\textsuperscript{93} This balances authors’ exclusive rights over their intellectual works with a set of exceptions and limitations enabling access.\textsuperscript{94} Notably, this is the essence of the advocates’ argument regarding the coexistence between international human rights and international intellectual property.\textsuperscript{95}

To sum up, the premise that there is a degree of compatibility between international intellectual property law and international human rights law, due to the similarity between the balance that both intend to achieve by means of the copyright/exception formula, is problematic because balance in international copyright law is not self-evident. Similarly, international human rights law should shape the norms of international copyright law, not vice versa. Therefore, there is a need to clarify the meaning of balance in international human rights law, in the context of the relationship between authors’ and users’ human rights, before comparing it with balance in international copyright law. The following section addresses this issue.

\section*{IV. The Requirement of Balance in Managing the Rights of Authors and Users (and Other Human Rights) in International Human Rights Law}

In their recognition of both authors’ moral and material interests and users’ rights in culture, arts and science over intellectual works, Articles 27 of the UDHR and 15 of the ICESCR do not allude to the existence of any tension between these rights and, accordingly, make no reference to the need for balance. Hence, there is a view that the drafters created a tension in Article 15 of the ICESCR and Article 27 of the UDHR without describing how to resolve it or, alternatively, the drafters may have viewed authors’ human rights over intellectual works as being inferior to users’ human rights.\textsuperscript{96}

The drafters of the UDHR and ICESCR did not intend to give lower weight to authors’ moral and material interests. These rights are fully developed in both form and substance. In form, authors’ moral and material interests in Article 27 of the UDHR and Article 15 of ICESCR are not set out as exceptions to users’ rights. That is, the structure of the articles does not reflect any hierarchy between authors’ moral and material interests and users’ rights in culture, arts and science. In substance, both articles grant authors all the rights accrued from their intellectual works, namely moral and material rights. These rights are as relevant to human dignity as any other human right, such as the right to life or freedom of expression. They also have an essential role in facilitating users’ rights in culture, arts and science. Moreover, there are more persuasive explanations of why the drafters of the UDHR and ICESCR did not address balance as a solution of the possible tension between authors’ moral and material interests and users’ rights in culture, arts and science. First, they saw both sets of rights as compatible, interdependent and reinforcing each other. Neither the UDHR nor the ICESCR requires the protection of authors’ moral and material interests by means of exclusive rights, which is only one way of implementing these rights and the method which most likely causes tension between authors and users. Second, the protection of authors and users in Article 27 of the UDHR and Article 15 of the ICESCR is affected by, and dependent upon, the protection of their respective rights under other provisions, such as the ones relevant to property, freedom of expression, education, non-discrimination, development, and many other rights.\textsuperscript{97} When all these rights are in play, the mode of their national implementation and the way individuals practice them generate a series of tensions, such as the tension between users’ freedom of expression allowing the dissemination of intellectual works and authors’ moral interests or privacy rights entitling them not to publish their intellectual works. The practical and multifaceted nature of these tensions makes their prediction and solution go beyond the task of the drafters of international human rights law. To sum up, the premise that there is a degree of compatibility between international intellectual property law and international human rights law, due to the similarity between the balance that both systems pursue between the private interests in protecting intellectual works and the public interest in providing access to those works.\textsuperscript{93} This balances authors’ exclusive rights over their intellectual works with a set of exceptions and limitations enabling access.\textsuperscript{94} Notably, this is the essence of the advocates’ argument regarding the coexistence between international human rights and international intellectual property.\textsuperscript{95}

\begin{itemize}
\item Authors’ moral interests—interpreted liberally—can also derive an important support from the human right to privacy. UDHR art 12:
\begin{quote}
No one shall be subjected to arbitrary interference with his privacy, family, home or correspondence, nor to attacks upon his honour and reputation. Everyone has the right to the protection of the law against such interference or attacks.
\end{quote}

international human rights instruments, whose balancing mission ends by articulating the different human rights in the international human rights instruments. National parliaments and courts are better equipped to deal with this task in light of the specificities of their respective jurisdictions and the constitutional principles drawn by international human rights law.  

A. The Types of Balance

Jurists have long debated the utility of balance as a metaphor in legal discourse. For instance, Professor Paul Kahn argues that balance as a judicial methodology is unacceptable because it is unable to produce principled justifications for its outcomes and allows the judiciary to intrude in the mission of the State’s political institutions. Professor Ronald Dworkin contends that the balance metaphor is misleading because it suggests a false description of the nation that must make. That is, it reflects a society-produced outcome of weighing the conflicting rights or freedoms instead of what justice requires. In contrast, Professor Jeremy Waldron explains that individuals’ moral reasoning inevitably involves balancing. Pragmatically, Judge Richard Posner argues that in situations where citizens’ rights and freedoms are to be weighed against the nation’s security, the metaphor of balance is ‘the proper way’ of thinking: ‘[o]ne pan contains individual rights, the other community safety, with the balance needing and receiving readjustment from time to time as the weights of the respective interests change.

Philosophers and jurists will always debate the value and fairness of balance and its different forms, yet today it is one of the fashionable terms used by courts to convey legitimacy on the process and outcome of their adjudication on human rights and freedoms. In following balance as a methodology or pursuing it as an outcome, courts usually attempt to find normative support in law, whether written or customary. For instance, the ECtHR has described the requirement to strike a balance between the human rights and freedoms of individuals and the collective public interest of the whole community as ‘inherent’ in the ECHR. Nonetheless, due to the diverse legal fields in which this concept is utilised, it may refer to different things depending on its application to the specific legal context. Therefore, it is important to clarify the meaning of balance with reference to the protection of authors’ and users’ human rights.

The meaning of balance in international human rights law is related to the ordinary dictionary definition. As Waldron notes, the metaphor of balance is applied in moral and political discourse ‘when there are things to be said on both sides of an issue, values that pull us in opposite directions’. Accordingly, balance first is the equal status that all human rights and freedoms enjoy in international human rights law consequent to their original allocation in their relevant instruments. In this respect, relevance to human dignity is the determinant of what rights or interests are included in the sacred list of human rights. Another important factor is public policy objectives that drafters of international human rights instruments may recognise as limitations on human rights and freedoms. As a result, the sum of the rights and freedoms in international human rights law and their limitations is the broad (or initial) balance presumed to have justly

108 eg ICCPR art 21:

The right of peaceful assembly shall be recognized. No restrictions may be placed on the exercise of this right other than those imposed in conformity with the law and which are necessary in a democratic society in the interests of national security or public safety, public order (ordre public), the protection of public health or morals or the protection of the rights and freedoms of others.
been struck in international human rights law. Part of this balance, of course, is the rights of authors and users of intellectual works.

Second, balance is the desired and required outcome from the national implementation of States’ obligations under international human rights law. International human rights law sets up a broad and balanced framework of legal requirements that States need to comply with by adopting many measures, such as introducing legislation or allocating financial resources. One of the challenges that States face in implementing international human rights law is to give due recognition to all human rights. The protection of all human rights including those of authors and users is one of these challenges. The protection of authors’ human rights by means of copyright usually triggers some tension between the human rights of authors, the human rights of users, as well as other human rights. In this situation, States are required to develop a remedy that achieves a balance between the human rights of authors and the other sets of human rights. In this capacity, balance is practically a requirement of international human rights law. As General Comment No. 17 explains, it is an obligation on the Member States of the ICESCR to ‘strike an adequate balance between their obligations under Article 15, paragraph 1 (c), on one hand, and under the other provisions of the Covenant, on the other hand, with a view to promoting and protecting the full range of rights guaranteed in the Covenant’.113

Third, courts usually apply the technique of balance when adjudicating tensions between the human rights of individuals, such as the tension between individual A’s privacy rights and individual B’s freedom of expression, or between the public interest represented by the State and individuals’ human rights, such as in the tension between the public interest in investigating crimes and the privacy rights of the accused. In these contexts, the technique of balance is supposed to be a neutral judicial method of applying the law by solely interpreting its provisions: courts themselves do not give weight to the litigants’ rights or freedoms, but merely interpret their range and substance. Balance or balancing has become a ‘natural methodology’ for legal interpretation due to its ‘resonance with current conceptions of law and notions of rational decision making’.116

General Comment No. 17 explains that determining the content and scope of authors’ and users’ human rights must be by means of balance, which comprises its second and third types. Thus, the implementation of these rights must adhere to a set of rules regulating how their content is interpreted in relation to each other and in relation to other human rights.

B. The Rules of Balance Implementation

Scholars have developed theoretical human rights frameworks for intellectual property protection. Professor Laurence Helfer proposes a human rights framework of intellectual property that would produce an ‘irreducible core of rights’ or ‘a core zone of autonomy’ in which the moral and material rights of authors and creators are subject to fewer limitations and exceptions than the ones imposed now by the intellectual property regime. Outside this zone stands a set of rights that States need not protect; however, if States choose to protect them, these rights have to be balanced against the other economic, social, and cultural rights (ESCR). Helfer argues that a human rights framework of intellectual property may evolve to 1) produce stronger intellectual property rights; 2) impose external limits on intellectual property rights in addition to the known limitations and exceptions; or 3) create a human rights-focused regime which merely recognises intellectual property protection to the extent required to achieve the human rights outcome relating to poverty, health, education, and other aspects of human rights.122

120 ibid 996–997.
121 ibid.
122 ibid 1015–1020.
Professor Peter Yu takes Helfer’s framework further by focusing on the tensions generated inside a human rights framework of intellectual property and suggests some means for solving them. He emphasises the importance of identifying the attributes of intellectual property rights that are protected under human rights law and those attributes which are not. Further, he identifies two forms of conflict between human rights and intellectual property rights: external and internal. The external conflict is between intellectual property law and human rights law, which could be solved by giving priority to the human rights attributes of intellectual property by virtue of the principle of human rights primacy. With respect to the internal conflict, between the different rights protected in the human rights instruments, Yu argues that the principle of human rights primacy is inapplicable, but that the conflict may be resolved through three approaches: (1) the just remuneration approach, (2) the core minimum approach, and (3) the progressive realization approach. Under the first approach, users have the freedom to use copyrighted works for the purpose of exercising their human rights, but this does not prejudice authors’ right to seek fair compensation. Under the second approach, States would not be in violation of the ICESCR if they offer authors less protection than that required by international copyright law as long as this protection satisfies the ‘core minimum obligations’ under the ICESCR. And under the third approach, subject to the availability of resources, States will endeavour to comply with all their obligations with respect to the protection of authors’ human rights.

An additional human rights framework, influenced by human rights law jurisprudence, proposes three rules for balance implementation. First, the human rights of authors and users are not absolute. Second, there is no hierarchy between them. Third, both sets of rights are to be interpreted in light of all other international human rights and freedoms.

1. No Absolute Rights

International human rights and freedoms are generally not absolute. The UDHR recognises their limited nature in Article 29:

(1) Everyone has duties to the community in which alone the free and full development of his personality is possible.
(2) In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society.
(3) These rights and freedoms may in no case be exercised contrary to the purposes and principles of the United Nations.

Accordingly, States can impose legal limitations on human rights so long as these limitations are not arbitrary, in that they are necessary for the protection of others’ rights or freedoms or other societal values in a democratic society. For instance, in criminal law, imprisonment restricts the freedom of movement of the people convicted of murder, but the general and specific deterrence achieved by this punishment, as well as the limitation of the convicted person’s freedom of movement, is necessary for the protection of the human right to life of all the other members of the society. Furthermore, several international human rights instruments include provisions that allow Member States to restrict human rights and freedoms for public policy objectives, such as the protection of public health or national security. For example, paragraph 1 of

131 These rules are analogous to the principles of interpretation that the Supreme Court of Canada applies on the human rights and freedoms of the Canadian Charter of Rights and Freedoms, Part I of the Constitution Act 1982. being Schedule B to the Canada Act 1982 (UK), 1982, c 11, s 2(b). For a discussion of these rules under Canadian law, see Ontario Human Rights Commission, Policy on Competing Human Rights (Ontario Human Rights Commission 2012); The Honourable Justice Iacobucci (n 114) 139–140.
132 UDHR art 29. See similarly, ICESCR art 4.
133 UDHR art 29; ICESCR art 4.
Article 18 of the ICCPR grants everyone the human right to freedom of thought, conscience and religion, but paragraph 3 of the same article allows prescribed limitations in law necessary for the protection of ‘public safety, order, health, or morals or the fundamental rights and freedoms of others’. More profoundly, in situations of emergency, such as war, Article 4(1) of the ICCPR allows Member States to derogate from their obligations under the covenant by taking the necessary measures to respond to the emergency. However, the ICCPR includes a set of non-derogable rights, such as the right to life, freedom from slavery and freedom from torture.

Likewise, the human rights of authors and users are subject to limitations. Authors’ moral and material interests can be subject to limitations and must be balanced with the other rights recognized in the [ICESCR]. These limitations must be prescribed by law and intended for the promotion of societal welfare. At the same time, they must be compatible with the nature of authors’ moral and material interests—namely the protection of the personal link between authors and their intellectual works—and their role in enabling authors to achieve an adequate standard of living. For example, the State may have a framework allowing the unauthorised reproduction of intellectual works in formats specifically accessible to people with visual disabilities. This limitation however, may entitle authors to compensatory measures.

Moreover, the protection of authors’ human rights to freedom of expression and property are also subject to limitations. Pursuant to Article 19(3) of the ICCPR, authors’ freedom of expression could be subject to limitations prescribed by law that are necessary for the respect of the rights of the others, or for the protection of national security, public order, public health or morals. Further, paragraph 2 of Article 17 of the UDHR impliedly allows deprivation of property in certain circumstances by prohibiting the arbitrary deprivation of property.

Equally, users’ human rights have their own limitations. General Comment No. 21 acknowledges that sometimes limiting the human right to participate in culture might be necessary. As with all other limitations on ESCR, such limitations must satisfy the requirements of Article 4 of the ICESCR: that the limitation must be prescribed by law, targeting a legitimate objective, compatible with the nature of the limited rights, and necessary for the promotion of the general welfare in the community. An example of such limitations is the exclusive authors’ rights provided in copyright statutes which may impose limitations on how users enjoy their rights to access, use, and share culture. Users’ rights under freedom of expression are also subject to limitations by virtue of Article 19(3) of the ICCPR. Finally, their rights to education can be subject to limitations by virtue of Article 4 of the ICESCR. Practically however, the scarcity of financial resources is a serious limitation on the human right to education in general.

The non-absolute nature of authors’ and users’ human rights is necessary to give effect to the meaning of balance in the implementation of these rights. Balance can take place only where the rights involved in the relationship are limited. For instance, when interpreting Article 3 of the ECHR on freedom from torture — a non-derogable freedom under the ICCPR — the ECtHR refused to balance this absolute freedom with the public interest in national security. Specifically, in case of Saadi v Italy, the ECtHR held that the assessment of the risk one imposes on a given community is irrelevant when the extradition of this person risks subjecting him or her to torture.

The non-absolute nature of authors’ and users’ human rights is what mandates and allows the balance between these rights. The limited nature of authors’ and users’ human rights creates a marginal but vital

The general rule in international human rights law is that the dead do not have human rights, because such rights are associated with the dignity of a living human being. Adam Rosenblatt, ‘International Forensic Investigations and the Human Rights of the Dead’ (2010) 32 Hum Rts Q 922, 942.
Furthermore, the length of protection in the Berne Convention does not necessarily contribute to providing an adequate standard of living for authors, which is the essence of authors’ material rights in international human rights law. That is, users’ human rights to access, use and share intellectual works might be postponed in favour of other rights not necessarily having a human rights character, such as when authors’ rights are assigned to corporations. It is true that the protection of the latter rights is important to redeem authors’ material interests in international human rights law, but a protection for the life of the author plus fifty years is excessive given the impact it has on users’ human rights to access, use and share culture. Herein, the useful role of copyright in fulfilling authors’ material interests might not outweigh its negative impact on users’ enjoyment of knowledge and the incentive to create further intellectual works: ‘knowledge is a hard commodity to appropriate, and it is socially inefficient to appropriate it.’ Copyright can be a useful vehicle to implement authors’ material interests, but it must not turn from being a shield against free riding into a sword undermining users’ ability to become (or continue being) authors. The current term of protection means that users will not be able to fully and freely enjoy intellectual works produced during their lifetime as protection may span up to three generations. Moreover, States are allowed to provide a longer term of protection, and many of them offer terms of protection that last for the life of the author plus seventy years after his or her death. Such terms render protection for copyrighted works produced today de facto unlimited for contemporary generations.

In addition to the limited nature of authors’ and users’ human rights, another element of the balance between these two sets of human rights is the absence of any hierarchy between them.

2. No Hierarchy between Rights

In national legal systems, legal rules exist in a normative hierarchy where constitutional rules take precedence over primary and secondary legal rules, such as statutes and regulations. In many jurisdictions, nonetheless, there is no hierarchy between the different individuals’ human rights and freedoms within the constitution; all human rights and freedoms have the same legal weight. For example, the Supreme Court of Canada has warned against a ‘hierarchical approach’ toward interpreting the rights and freedoms of the Charter of Rights and Freedoms, and emphasised that attempts to give some of its rights and freedoms ‘superior status in a “hierarchy” of rights must be rejected.’ In a similar vein, the United States Supreme Court found no ‘distinction between, or hierarchy among, constitutional rights’ since there was ‘no principled basis on which to create a hierarchy of constitutional values’. However, in Europe, the acceptability of this doctrine is less clear. In Germany, for instance, there is a debate among scholars regarding the existence of a hierarchy of rights in the Basic Law of Germany.

163 WIPO (n 152) 46 (noting that blanket licensing makes the length of copyright of little relevance to authors).
164 General Comment No. 17 (n 6) para 16.
167 WIPO (n 152) 46 (stating that ‘[m]ost countries have felt it fair and right that the average lifetime of an author and his direct descendants should be covered, ie, three generations’).
168 Eg The Constitution Act 1867(UK), 30 & 31 Vict, c 3, s 52. (1), reprinted in RSC 1985, App II, No 5: (‘[t]he Constitution of this country has been declared to be, and is hereby declared to be, the supreme law of the land’).
172 Gosselin v Quebec (Procureur général), 2005 SCC 15 [2005] 1 SCR 238 [26].
In international law, there is a disagreement on whether a hierarchy exists among its norms. This disagreement extends to cover the issue of whether a hierarchy exists within international human rights norms. Nonetheless, the closest hierarchy debate relevant to balancing authors’ and users’ rights regarding intellectual works concerns the debate on assigning superiority to civil and political rights (CPR) over ESCR. As explained earlier, authors’ moral and material interests and users’ rights to culture, arts and science under Article 15 of the ICESCR and Article 27 of the UDHR are ESCR. At the same time, authors and users can protect the same rights relying on their CPR, such as freedom of expression, by means of the interdependence and indivisibility of human rights’ principles. This means that a tension between authors and users can result from the exercise of human rights that do not have the same nature: for example, ESCR of users versus CPR of authors. For balance to be possible in this case, it is important to reject any attempt to present one of these categories of human rights as superior to the other.

The attempts to give CPR superiority over ESCR date back to the time when the United Nations Commission on Human Rights took on the mission of drafting a single international legal instrument codifying and elaborating the aspirations of the UDHR. During this process, the ideological divide between the Western Bloc and the Eastern Bloc sparked the debate on the weight of both sets of human rights and, thus, the appropriateness of codifying them in one instrument. Specifically, the United States, leading the Western Bloc, viewed ESCR as a socialist notion and was reluctant to adopt a treaty that would put them on an equal footing with CPR. The argument was that ESCR were not justifiable and non-justiciable (that is, not legally enforceable rights by courts), but instead aspirations that required States to take positive measures to have them implemented, such as committing the allocation of economic resources. In contrast, the United States argued that CPR were ‘enforceable, justifiable, absolutely fundamental, and, therefore, immediately applicable’. The Western countries emphasised that these rights were negative rights — liberties — that did not require the intervention of the State for their achievement but merely required it to refrain from interfering with them.

The Soviet Union led the other view, supported by socialist States and third-world countries, arguing that ESCR were as important as CPR and that their protection was an essential requirement for the practical achievement of CPR. At the end, the Commission on Human Rights drafted two independent treaties: the ICESCR and ICCPR. Following this split, throughout the twentieth century, States emphasised CPR while overlooking ESCR.

---

277 See eg Meron (n 170) 22 (arguing that in international human rights law there is no accepted system by which higher rights can be identified and their content determined, and warning that a liberal invocation of a hierarchy of norms in international human rights could ‘adversely affect the credibility of human rights as a legal discipline.’); Dinah Shelton, ‘Hierarchy of Norms and Human Rights: of Trumps and Winners’ (2002) 65 Salk L Rev 301, 310 (arguing that a hierarchy of international human rights has several bases in international human rights instruments).
280 Philip Alston, ‘Economic and Social Rights’ (1994) 28 Stud Transnat’l Legal Pol’y 137, 142; Stark (n 179) 220; Mutua (n 178) 616; Steiner, Alston and Goodman (n 178) 264.
282 Mutua (n 178) 616; Steiner, Alston and Goodman (n 178) 272. See also E W Vierdag, ‘The Legal Nature of the Rights Granted by the International Covenant on Economic, Social and Cultural Rights’ (1978) 9 NYIL 69, 92–93 (rejecting the characterization of ESCR as human rights as that would make courts deal with political questions and thus violate the separation of powers doctrine).
283 Mutua (n 178) 616.
284 Mutua (n 178) 616; Steiner, Alston and Goodman (n 178) 272. This was in line with the notion of the ‘minimal State’. According to Robert Nozick, Anarchy, State, and Utopia (Basic Books 1974) 238,

‘[t]he major objection to speaking of everyone’s having a right to various things such as equality of opportunity, life, and so on, and enforcing this right, is that these ‘rights’ require a substructure of things and material and actions; and other people may have rights and entitlements over these. No one has a right to something whose realization requires certain uses of things and activities that other people have rights and entitlements over.’

285 Stark (n 179) 220; Steiner, Alston and Goodman (n 178) 272.
286 Mutua (n 178) 615.
The premise of a hierarchy between CPR and ESCR is flawed. First, in its interpretation of the nature of States’ obligations under the ICESCR in General Comment No. 3, the CESCR has explained that ‘while the [ICESCR] provides for progressive realisation and acknowledges the constraints due to the limits of available resources, it also imposes various obligations which are of immediate effect’. The CESCR has identified the ‘undertaking to guarantee [without discrimination]’ and the obligation to ‘take steps’ as examples of obligations of immediate effect, which have ‘particular importance’ in interpreting the nature of States’ obligations under the ICESCR. Secondly, the CESCR has explained that the ICESCR imposes upon every Member State ‘a minimum core obligation to ensure the satisfaction of, at the very least, minimum essential levels of each of the rights’. For instance, a State in which most individuals lack access to necessary foodstuff, basic health care, housing, and very basic education is not compliant with its obligations under the ICESCR. The State cannot discharge its obligation of taking steps to the maximum of its available resources unless it shows that ‘every effort has been made to use all resources that are at its disposition in an effort to satisfy, as a matter of priority, those minimum obligations’.

Thirdly, although the implementation of ESCR may require some greater allocation of resources, the implementation of many CPR—such as the voting right—involves an economic dimension, as they require governmental action and financial expenditure for their implementation. Also, several CPR are interlinked with ESCR. For instance, the right to education is said to be ‘adjunct’ or ‘part of’ political rights. This is why establishing a hierarchy between CPR and ESCR was rejected by the majority of the drafters of the UDHR, who viewed all the rights and freedoms of the declaration to have been ‘cut from the same moral cloth’ and treated the UDHR as a ‘kingdom of human rights [where] there are no second-class citizens’. Therefore, it is not surprising to see that all Western democracies, except the United States, endorse the legality and importance of ESCR.

Similarly, in Africa, Asia, and Latin America, many national constitutions protect ESCR. In Canada, on the other hand, the Charter of Rights and Freedoms does not explicitly protect ESCR; however, bound by the Supreme Court of Canada’s jurisprudence, the Government of Canada has informed the CESC that section 7 of the Charter of Rights and Freedoms ‘may be interpreted to include the rights protected under

---

197 ibid.

201 Charter of Rights and Freedoms, s 7: ‘[e]veryone has the right to life, liberty and security of the person and the right not to be deprived thereof except in accordance with the principles of fundamental justice.’.
the [ICESCR] and is ‘guaranteeing that people are not to be deprived of basic necessities’. In return, the CESCR noted with satisfaction that the Federal Government has acknowledged, in line with the interpretation adopted by the Supreme Court, that section 7 […] guarantees the basic necessities of life, in accordance with [ICESCR].

Finally, with respect to the non-justiciability of ESCR, in General Comment No. 9, the CESCR has explained that ‘there is no […] [ICESCR] right which could not, in the great majority of systems, be considered to possess at least some significant justiciable dimensions’. Moreover, as aptly argued by Alston, international human rights law obligations are connected with the notions of ‘implementation’ and ‘supervision’ rather than ‘justiciability’ or ‘enforceability’; this means that once States have obliged themselves to accept international obligations with regard to individuals’ rights and freedoms, they shall give effect to these obligations. In addition, available international mechanisms for supervising States’ compliance with their obligations under the ICESCR are sufficient to characterise those obligations as enforceable. Further, the Optional Protocol to the International Covenant on Economic, Social and Cultural Rights significantly boosts the implementation of the ICESCR. By virtue of this protocol, the CESCR has jurisdiction to receive complaints from individuals and communities alleging that States have violated their ESCR. Further, at the regional level, a number of human rights instruments have established considerable development with respect to the implementation of ESCR by entitling individuals to launch complaints against infringement of their ESCR. Nationally, the emergence of a body of national case law giving effect to ESCR has proven the fallacy of the non-justiciability argument against ESCR.

As affirmed by the World Conference on Human Rights, ‘[a]ll human rights are universal, indivisible and interdependent and interrelated. The international community must treat human rights globally in a fair and equal manner, on the same footing, and with the same emphasis.’ By the same token, neither authors nor users of intellectual works can claim superiority over one another in human rights law by relying on a hierarchy between CPR and ESCR. Also, lawmakers and courts should avoid any hierarchy of this nature when balancing the human rights of authors and users.

Rejecting a hierarchy between human rights, regardless of its basis, would expose a number of points of imbalance in international copyright law. For example, international copyright law incorporates a number of provisions that address users’ human rights, such as the provision excluding news of the day from copyright protection. This is a mandatory provision and meant, inter alia, to address users’ human right to freedom of expression, a civil and political right. On the other hand, international copyright law addresses...
the human right to education — an economic, social and cultural right — in an optional provision relating to permitting the utilisation of copyrighted works by way of illustration in teaching activities.\(^{219}\) The mandatory protection of freedom of expression versus the optional protection of the human right to education creates a hierarchy between those human rights that is inconsistent with the requirements of balance in international human rights law. This hierarchy echoes the historical discrimination against ESCR in favour of CPR.

Furthermore, whereas the Berne Convention and the WCT protect moral rights, TRIPS has dropped moral rights from its protection.\(^{220}\) In this regard, TRIPS creates a hierarchy between authors’ economic rights and moral rights. Given the importance of moral rights to the human author’s dignity, and given the trade environment of TRIPS, one can further argue that TRIPS creates a hierarchy between the rights of the human authors and the economic rights of corporations, as a category of rights holders. As Gervais aptly described, by overlooking moral rights, TRIPS ‘split the copyright coin’.\(^{221}\) As a result, it ‘may have weakened the intrinsic equilibrium of copyright and, hence, the “power to convince” that copyright has traditionally enjoyed’.\(^{222}\) Overlooking moral rights in TRIPS has tilted its balance toward the economic interests of copyright holders at the expense of authors’ moral interests.\(^{223}\) Given the declining importance of the Berne Convention as an independent international copyright instrument — outside the scope of its incorporation in TRIPS\(^{224}\) — one may reasonably infer a decline of the status of authors’ moral rights in international copyright law, which is injurious to the relation between this regime and international human rights law. Additionally, to the extent one finds in moral rights a right of users to receive authentic and accurate works, excluding moral rights from protection creates a hierarchy between the economic interests of rights holders and this implicit users’ right.

Moreover, in international copyright law, the principle of automatic protection, which provides that the existence and exercise of copyright must not be subject to any formalities,\(^{225}\) is central for the protection of authors’ human rights. It confirms that copyright implements, rather than creates, authors’ moral and material interests. On the other hand, this principle may impede the enjoyment of users’ human rights and, hence, it creates a hierarchy. For instance, the automatic protection, along with the long term of copyright protection, is responsible for the ‘orphan works’\(^{226}\) problem.\(^{227}\) Automatic protection requires users to assume that every intellectual work is protected even when it does not have an official registration record identifying its copyright owner and other relevant information, such as its date of publication.\(^{228}\) Fearing liability, users are hesitant to use works that might still be covered by copyright, and their search for the owner of the work to obtain permission to use it will usually involve extra time and financial expenses.\(^{229}\) Although the simplest solution to this problem may be through a compulsory registration regime, that would violate the Berne Convention and TRIPS.\(^{230}\)

Thus, for example, the US Copyright Office’s Report on Orphan Works has suggested a statutory regime that only limits the responsibility of users of orphan works who, despite their good faith search, fail to locate the owners of such works and who, if possible, provide proper attribution to the author and copyright owner.\(^ {231}\)

In Canada, the issue of orphan works is solved by section 77 of the Copyright Act,\(^ {232}\) which authorises the Copyright Board to issue non-exclusive licenses to use orphan works.

232 Copyright Act 1985, s 77.
Europe has also developed a system allowing public libraries, educational institutions, museums, archives, and similar public interest establishments to make available to the public and reproduce orphan works.\textsuperscript{231}

The rejection of a hierarchy between human rights is consistent with the holistic view of international human rights, which is another important rule of balance.

3. Holistic View of Rights

A holistic approach to statutory interpretation means that courts will interpret a particular provision in a statute in light of ‘the whole statute (or statutes on the same subject) and the objects and policy of the law, as indicated by its various provisions, and give to it such a construction as will carry into execution the will of the Legislature, as thus ascertained, according to its true intent and meaning’.\textsuperscript{234} This ‘is the most realistic in view of the fact that a legislature passes judgment upon the act as an entity, not giving one portion of the act any greater authority than another’.\textsuperscript{235} Regarding human rights, this approach will ensure that ‘one right is not privileged at the expense of another’,\textsuperscript{236} and its applicability to the interpretation of international human rights law is in harmony with the fact that all human rights are equal, interdependent, indivisible, and necessary for the respect of the dignity of human beings.

To achieve balance in the implementation of authors’ and users’ human rights, through legislation or adjudication, lawmakers and courts must interpret the content and boundaries of authors’ and users’ human rights in light of each other and in light of the whole corpus of international human rights. That is, each human right must not prejudice the content of any other human right. For instance, the protection of authors’ human rights must not prejudice others’ human rights to privacy or freedom of expression and the right to participate in culture must not impair authors’ human right to an adequate standard of living. The CESCR was clear that authors’ moral and material interests ‘cannot be isolated from the other rights recognized in the Covenant’,\textsuperscript{237} such as the human right to education, food, health, an adequate standard of living, and other human rights recognised in the ‘International Bill of Human Rights and other international and regional instruments [. . .]’.\textsuperscript{238} Therefore, every member of the ICESCR has a core obligation of immediate effect ‘to strike an adequate balance’ between the protection of authors’ moral and material interests and the protection of other ESCRs.\textsuperscript{239}

Since international copyright law creates some hierarchies between the human rights it regulates and has a low degree of limitation on copyright, it is inevitable that it will not be able to strike an appropriate balance between copyright and international human rights as a whole. For example, international copyright law does not have a specific exception or limitation that facilitates the role of archives and museums in the preservation of culture, it does not have a specific exception or limitation for libraries, and it does not include a mandatory first-sale doctrine that would protect the human right to property of purchasers of items embodying intellectual works. The situation of the human right to development\textsuperscript{240} in international copyright law is not more favourable. The balance between the interests of the developed countries in the protection and enforcement of copyright and the interests of the less developed countries in socio-economic development is one of the several forms of balance that international copyright law must strive to achieve.\textsuperscript{241}

However, since international copyright law’s minimum standards of protection apply in developed and less developed countries alike, despite countries’ different socio-economic circumstances surrounding the creation and use of copyrighted works, these standards create a formal, not substantive, balance.\textsuperscript{242} This means that international copyright law adopts a one-sided approach toward the protection of authors’ rights that may overlook other similarly important human rights. This is a serious concern linked to the overall fairness

of international copyright law and should be a trigger to introduce a ‘principle of substantive equality’ that renders the protection of copyright in international copyright law to be considerate of the development gap between countries. Professor Margaret Chon notes that the TRIPS regime focuses only on the economic aspect of development by emphasising ‘utility maximization’ and overlooks the social, cultural and political aspects of development. Thus, she argues that ‘the net result is an intellectual property balance that has become increasingly lopsided in favor of producer interests, possibly to the detriment of overall global social welfare and clearly to the detriment of the most vulnerable populations.’ TRIPS addresses the importance of access to, and use of, intellectual property for the development of less developed countries in Articles 7 and 8. These articles, however, according to the WTO panel in Canada—Patent Protection of Pharmaceutical Products, still await their appropriate interpretation. These two provisions are not mandatory; thus, their effect in creating substantive equality between the protection and enforcement of copyright and less developed countries’ socio-economic interests is quite limited.

V. Conclusion

Reaching a verdict on whether balance in international copyright law is compliant with the balance that international human rights law requires between authors’ and users’ human rights is a work in progress. International copyright law has yet to clarify the meaning and content of balance under its different instruments. Furthermore, the High Commissioner of Human Rights and the CESCR have not distinguished the ambiguous balance in international copyright law from balance in international human rights law. Therefore, international human rights law bodies and jurists should look at authors’ and users’ human rights — and the balance between them — through a human rights lens. A human rights balance between authors’ and users’ human rights means that the implementation and/or adjudication of these human rights must adhere to the following rules: both sets of human rights are reciprocally limited; they do not exist in a hierarchy; and their proper interpretation occurs only in light of the interrelation and indivisibility of all international human rights. Moreover, international copyright law bodies and jurists should carefully consider this human rights framework of balance in any future attempt to clarify the meaning and content of balance in international copyright law or to measure the compliance of the latter’s norms with international human rights law. Unless international copyright law adheres to balance within its meaning in international human rights law, the similarity between the balance that international copyright law claims to create between the different interests under its umbrella and the balance required under international human right law between authors’ and users’ human rights — and between these two sets of human rights and the whole body of human rights — remains one of terminology rather than ideology.

Competing Interests

The author declares that they have no competing interests.
