The research presented in this thesis was carried out at the Department of Pharmaceutical Technology and Biopharmacy of the University of Groningen. Financial support for printing the thesis was received from InnoCore Technologies, the University Library and the Graduate School of Science and Engineering of the University of Groningen.

Protein delivery from polymeric matrices

From pre-formulation stabilization studies to site-specific delivery

Proefschrift

ter verkrijging van de graad van doctor aan de
 Rijksuniversiteit Groningen
 op gezag van de
 rector magnificus prof. dr. E. Sterken
 en volgens besluit van het College voor Promoties.

De openbare verdediging zal plaatsvinden op

vrijdag 20 april 2018 om 14.30 uur

door

Naomi Teekamp

geboren op 17 januari 1987
 te Zevenaar

Promotores

CONTENTS

7

Chapter 1. Introduction and scope of this thesis

15

Chapter 2. Production methods and stabilization strategies for polymer-based nanoparticles and microparticles for parenteral delivery of peptides and proteins

57

Chapter 3. Addition of Pullulan to Trehalose Glasses Improves the Stability of β -Galactosidase at High Moisture Conditions

79

Chapter 4. Protein Stability during Hot Melt Extrusion: The Effect of Extrusion Temperature, Sugar Glass Pre-stabilization and Hydrophilicity of Polymers

101

Chapter 5. Polymeric Microspheres for the Sustained Release of a Protein-based Drug Carrier Targeting the PDGF β -Receptor in the Fibrotic Kidney

131

Chapter 6. Pharmacokinetics and Pharmacodynamics of a Sustained Release Formulation of PDGF β -Receptor Directed Proteins to Target the Fibrotic Liver

159

Chapter 7. General Discussion and Future Directions

181

Chapter 8. Summary, Samenvatting, Curriculum Vitae, List of Publications, Dankwoord
