Quantification and Kinetic Analysis of Brain PET Studies
Mansor, Syahir

IMPORTANT NOTE: You are advised to consult the publisher's version (publisher's PDF) if you wish to cite from it. Please check the document version below.

Document Version
Publisher's PDF, also known as Version of record

Publication date:
2017

Link to publication in University of Groningen/UMCG research database

3 New Scatter Correction Strategies on HRRT Studies

3.1 Introduction .......................................................... 35
3.2 Materials and Methods ............................................. 36
  3.2.1 Subjects and Data Acquisition ................................. 36
  3.2.2 Image Reconstruction and Data Processing .................. 37
  3.2.3 Scatter Correction .............................................. 37
  3.2.4 Assessment of Patient Motion ................................. 38
  3.2.5 Pharmacokinetic Analysis ...................................... 38
  3.2.6 Quantitative Accuracy Assessment ........................... 40
3.3 Results ......................................................................... 40
  3.3.1 Assessment of Patient Motion .................................. 40
  3.3.2 Impact of an ACF-Margin Prior to Scatter Scaling Estimation on $V_T$ ................................. 40
  3.3.3 Impact of 2D SSS Versus 3D SSS on $V_T$ ...................... 41
3.4 Discussion .................................................................. 43
  3.4.1 Effects of an ACF-Margin on Quantitative Accuracy .......... 43
  3.4.2 Effects of 2D Versus 3D SSS on Quantitative Accuracy ........ 44
  3.4.3 Future Perspectives .............................................. 45
3.5 Conclusions ............................................................. 47

Bibliography ................................................................. 48

4 Experimental assessment of PET/CT repeatability

4.1 Introduction .......................................................... 54
4.2 Materials and Methods ............................................. 55
  4.2.1 Phantom experiments ............................................ 55
  4.2.2 Evaluation of parametric image statistics .................. 56
  4.2.3 Regional assessments ............................................ 56
4.3 Results ......................................................................... 58
  4.3.1 Noise characteristic for the $^{68}$Ge Phantom ................ 58
  4.3.2 NEMA IQ phantom .............................................. 58
  4.3.3 3D Hoffman brain phantom evaluation ....................... 61
4.4 Discussion ................................................. 63
  4.4.1 $^{68}$Ge phantom experiment ......................... 63
  4.4.2 NEMA IQ-phantom ..................................... 63
  4.4.3 Hoffman brain phantom .............................. 65
  4.4.4 Future perspectives ................................. 66
4.5 Conclusion ................................................. 67

Bibliography ................................................. 68

5 $^{[11]}$C phenytoin quantification ................................................. 71
  5.1 Introduction ............................................. 73
  5.2 Materials and Methods ................................... 73
    5.2.1 Subjects ........................................... 73
    5.2.2 Imaging Procedure ................................ 74
    5.2.3 Blood Analysis .................................... 74
    5.2.4 Image Analysis .................................... 75
    5.2.5 Kinetic Analysis ................................... 75
    5.2.6 TRT Variability .................................... 76
  5.3 Results .................................................. 76
    5.3.1 PET Image and Blood Data Analysis ............... 76
    5.3.2 Compartmental Modeling ........................... 77
    5.3.3 TRT Repeatability ................................. 78
    5.3.4 Impact of Scan Duration ............................ 80
  5.4 Discussion ................................................. 80
  5.5 Conclusion ................................................. 84
  5.6 Supplementary materials ............................... 85

Bibliography ................................................. 88

6 $^{[11]}$C phenytoin quantification using parametric methods .................. 92
  6.1 Introduction ............................................. 94
  6.2 Materials and Methods ................................... 94
    6.2.1 Scanning protocol ................................ 94
    6.2.2 Blood and Image Analysis ......................... 95
    6.2.3 Parametric Analysis ................................ 95
  6.3 Results .................................................. 96
    6.3.1 Evaluation of bias between NLR and parametric methods .... 96
    6.3.2 Test–Retest repeatability ........................... 96
    6.3.3 Impact of Scan Duration ............................ 97
