On the molecular biology of telomeres

Lessons from budding yeast

PhD thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus Prof. E. Sterken
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on
 Monday 3 December 2018 at 11.00 hours

by

Sonia Stinus Ruiz de Gauna

born on 18 April 1989
 in Donostia - San Sebastián, Spain

Supervisor

Prof. G. de Haan

Co-supervisor

Dr. M. Chang

Assessment Committee

Prof. M.A.T.M. van Vugt

Prof. F. Fojjer

Prof. B. Luke

Chapter 1: Introduction	7
1. Telomeres	9
1.1. Structure of telomeres	9
1.2. Protection of <i>Saccharomyces cerevisiae</i> telomeres	10
1.2.1. Single-stranded telomeric DNA binding proteins	10
1.2.2. Double-stranded telomeric DNA binding proteins	11
1.2.3. Telomere-associated proteins	12
1.3. Regulation of telomere length	14
1.3.1. Telomere length regulation by homologous recombination mechanisms	14
1.4. Transcription at telomeres: telomere position effect and TERRA	15
1.5. Biology of mammalian telomeres	16
1.5.1. Telomere structure and composition of the shelterin complex	16
1.5.2. Regulation of telomere length	18
1.5.3. Transcription of human telomeres: telomere position effect and TERRA	18
2. G-quadruplexes	19
2.1. Role of G-quadruplexes in replication	20
2.2. Role of G-quadruplexes at telomeres	21
2.2.1. Telomerase regulation by G-quadruplexes	22
2.2.2. Telomere protection by G-quadruplexes	22
3. Thesis overview	23
Chapter 2: A sharp Pif1-dependent threshold separates DNA double-strand breaks from critically short telomeres	25
Abstract	26
Introduction	27
Results	28
Identification of a Pif1-insensitivity threshold at DNA ends	28
A DSB-telomere transition also exists at chromosome ends	30
Pif1 is not inhibited by DNA damage kinases	33
Artificial telomerase recruitment does not outcompete Pif1	34
The DSB-telomere transition recapitulates the differential regulation of Pif1	36
Investigating the molecular trigger of the DSB-telomere transition	37
Cdc13 function influences the fate of DNA ends	38
Discussion	43
Methods	45
Supplementary data	50

Chapter 3: Telomerase regulation by the Pif1 helicase – a length-dependent effect?	61
Chapter 4: Investigating the role of G-quadruplexes at <i>Saccharomyces cerevisiae</i> telomeres	69
Abstract	70
Introduction	71
Results	72
G-quadruplexes mediate a non-essential telomere protection function	72
<i>tlc1-tm</i> cells senesce very rapidly in the absence of telomerase	74
Telomerase-dependent telomere extension is dramatically increased at <i>tlc1-tm</i> telomeres	75
Telomere binding proteins are affected in <i>tlc1-tm</i> telomeres	76
Telomere homeostasis is altered in <i>tlc1-tm</i> cells	78
<i>tlc1-tm</i> repeats are not counted as telomeric sequence in terms of telomere length homeostasis	80
Discussion	81
Materials & methods	83
Supplementary data	88
Chapter 5: Discussion and future perspectives	91
A ~40 nt length threshold separates telomeres from DSBs	92
Development of the inducible STEX assay	93
Cdc13-independent telomerase recruitment to chromosome ends	94
Non-essential G-quadruplex-mediated telomere protection	94
Characterisation of a Rap1-free telomere	95
Bibliography	97
Appendix	113
Nederlandse samenvatting	114
Summary in English	116
Resumen en español	118
Résumé en français	120
Curriculum vitae	124
List of publications	125
Acknowledgements	126
