A Terahertz View On Magnetization Dynamics

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. E. Sterken
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on
Friday 18 January 2019 at 14.30 hours

by

Nilesh Awari

born on 28 September 1987
in Sangamner, India

Supervisor

Prof. T. Banerjee

Co-supervisors

Dr. M. Gensch

Dr. R. I. Tobey

Assessment committee

Prof. B. Koopmans

Prof. M. Münzenberg

Prof. L.J.A. Koster

Dedicated to my Father

Contents

List of Figures	vii
List of Tables	ix
1 Introduction	1
1.1 Outline of the thesis	3
1.2 Bibliography	4
2 Introduction to Magnetism	7
2.1 Origin of magnetism and magnetic properties	8
2.2 Magnetic properties of materials	10
2.3 Ultra-fast magnetization dynamics	13
2.4 Bibliography	19
3 Experimental Techniques	23
3.1 THz emission spectroscopy	24
3.1.1 Electro-Optic Sampling	25
3.2 Magneto-optic effect	26
3.2.1 Faraday effect	27
3.2.2 Magneto-optical Kerr effect (MOKE)	28
3.3 Light sources	29
3.3.1 Near infra-red (NIR) femtosecond laser sources	29
3.3.2 Laser-based THz light sources	30
3.3.3 TELBE	32
3.4 Bibliography	34
4 Narrow-band Tunable THz Emission from Ferrimagnetic $Mn_{3-x}Ga$ Thin Films	41
4.1 Introduction	42
4.2 Experimental details	43
4.3 Results & Discussion	48
4.3.1 Effect of Mn content on THz emission from $Mn_{3-x}Ga$	50
4.3.2 Effect of laser power on THz emission from $Mn_{3-x}Ga$	52
4.3.3 Effect of temperature on THz emission from $Mn_{3-x}Ga$	54
4.3.4 Field dispersion for $Mn_{3-x}Ga$	55
4.3.5 Thickness dependence of THz emission from $Mn_{3-x}Ga$	57
4.4 Conclusion & Outlook	58

4.5	Bibliography	60
5	THz-Induced Demagnetization: Case of CoFeB	65
5.1	Introduction	66
5.2	Experimental details	68
5.3	Results & Discussion	72
5.4	Conclusion & Outlook	79
5.5	Bibliography	80

List of Figures

1.1	Areal density growth of HDD devices as a function of time.	2
2.1	Different types of magnetic ordering present in materials.	10
2.2	Properties of a typical ferromagnet.	12
2.3	Susceptibility as a function of temperature for different magnetic ordering.	13
2.4	Schematic of the magnetic precession.	15
2.5	Schematic of time scales involved in laser driven excitation of magnetic materials.	17
2.6	Effect of femtosecond laser excitation on magnetic materials.	18
3.1	Schematic of the electro-optic set-up.	26
3.2	Schematic of the Faraday set-up.	28
3.3	Geometries for measurement of Kerr effect.	29
3.4	Schematic of the polar MOKE set-up.	30
3.5	Schematic of the optical rectification process for THz generation.	31
3.6	Electric field and power spectrum of LiNbO ₃ as a THz source.	32
3.7	Schematic representing the principle of superradiant process.	33
3.8	Maximum pulse energy observed at TELBE as a function of repetition rate, for a given THz frequency	34
3.9	Frequency tunability of TELBE source.	35
4.1	Schematic of the THz emission spectroscopy set-up and sample geometry employed for the Mn _{3-X} Ga samples.	44
4.2	Schematic of the idealized crystal structure of Mn ₃ Ga	44
4.3	Schematic of the bilayer system in Mn _{3-X} Ga thin films	46
4.4	Emitted THz wave-forms from Mn _{3-X} Ga thin films because of NIR laser irradiation	49
4.5	Analysis of the THz emission measurements	51
4.6	The 180° phase shift of FMR mode observed in Mn _{3-X} Ga thin film.	51
4.7	Resonant THz excitation of the FMR mode in Mn ₃ Ga thin film	52
4.8	Laser power dependence of the emitted THz emission from Mn _{3-X} Ga thin films	53
4.9	Temperature dependence of the emitted THz emission from Mn _{3-X} Ga thin films	55
4.10	Schematic of the THz emission spectroscopy set-up and sample geometry employed with 10 T split coil magnet	56
4.11	Field dispersion relation for ferromagnetic mode in Mn _{3-X} Ga thin films	56
4.12	THz emission from the films with island morphology	57

4.13	Thickness dependence of the emitted THz emission from Mn_{3-x}Ga thin films	59
4.14	Characterization of Mn_{3-x}Ga thin films for tunable, narrow band THz source.	59
5.1	Experimental set-up used for narrow band THz pump MOKE probe measurements.	69
5.2	Experimental geometry used in the experiments	69
5.3	The electric field waveform of 0.5 THz used in the experiment	70
5.4	Example showcasing the coherent and incoherent contributions of THz induced magnetization dynamics in CoFeB	70
5.5	Ultra-fast demagnetization observed in CoFeB at 0.5 THz pump	71
5.6	Ultra-fast demagnetization observed in CoFeB thin films with THz pump as a function of pump power	73
5.7	Excitation of the FMR mode in CoFeB using THz as a pump.	73
5.8	Ultra-fast demagnetization observed in CoFeB thin films at 0.7 THz 1 THz pump	74
5.9	Ultra-fast demagnetization observed in CoFeB thin films as a function of the THz pump frequency	75
5.10	Comparison of ultra-fast demagnetization observed in CoFeB thin films at 0.7 THz pump, taken 6 months apart	75
5.11	Effect of implantation on THz induced ultra-fast demagnetization observed in CoFeB	79
6.1	Illustration of the crystallographic and magnetic structure of NiO.	86
6.2	Sketch of the THz pump Faraday rotation probe technique used for NiO.	87
6.3	Electric field and power spectrum of the utilized THz radiation.	87
6.4	Illustration of the two distinct magnetic modes in antiferromagnetic resonance.	88
6.5	Typical transient Faraday measurement for NiO obtained at 280 K.	90
6.6	Temperature dependence of the magnon mode in NiO.	91
6.7	Field dispersion for magnon mode in NiO.	92
6.8	Theoretical calculation of Field dependence of the higher-energy spin modes in NiO.	96

List of Tables

4.1	M_s from VSM [6, 8] and inferred values of $10H_k$ from dynamic THz emission measurements. THz emission measurements have been performed in the presence of an external magnetic field of 400 mT and at a temperature of 19.5°C. THz driven Faraday rotation measurements were performed with an external magnetic field of 200 mT.	53
5.1	A summary of the THz frequencies used in the THz pump Polar MOKE experiments along with their peak electric field values.	71
