Integrating an *ex vivo* model
into fibrosis research

Emilia Gore

2019

The research presented in this thesis was financially supported by ZonMw (The Netherlands Organization for Health Research and Development), grant number 114025003.

The work presented in this thesis was conducted at the Groningen Research Institute of Pharmacy, department of Pharmaceutical Technology and Biopharmacy, University of Groningen, The Netherlands, at the Institute of Translational Immunology, Johannes Gutenberg University Mainz, Germany and at Boehringer Ingelheim Pharma GmbH & Co. KG, Germany. For this project we collaborated with the University Medical Center Groningen, The Netherlands.

Printing of this thesis was supported by the University of Groningen, Faculty of Science and Engineering and the University of Groningen Library

Integrating an *ex vivo* model into fibrosis research

PhD thesis

to obtain the degree of PhD at the
 University of Groningen
 on the authority of the
 Rector Magnificus prof. E. Sterken
 and in accordance with
 the decision by the College of Deans.

This thesis will be defended in public on

Friday 12 July 2019 at 14.30 hours

by

Emilia Gore

born on 24 August 1987
 in Pucioasa, Romania

Supervisor

Prof. P. Olinga

CONTENTS

1	Introduction	10
2	Next generation sequencing reveals in-depth features of murine and human precision-cut tissue slices	22
3	<i>Ex vivo</i> human fibrosis model: characterization of healthy and diseased precision-cut tissue slices by next generation sequencing	64
4	Investigating fibrosis and inflammation in an <i>ex vivo</i> NAFLD murine model	102
5	PI3K inhibition reduces murine and human liver fibrogenesis in precision-cut liver slices	138
6	Thorough evaluation of the liver expression of GPNMB (Glycoprotein Nonmetastatic Melanoma Protein B) in murine and human liver diseases using precision-cut liver slices	168
7	General discussion and perspectives	192
8	Summary	210
9	Appendices	218
