Time flies and now it finally comes to the end of my four-and-half-year PhD study. I remember at this time of last year, I questioned deeply if I could manage this intense task. Luckily, life knows better what I can accomplish, and things were put up together one after another till completion. I consider who also know better than me in this respect are the brilliant people surrounding me, who have provided their valuable support and encouragement to me. At this moment, I would like to take the opportunity to express my gratitude to everyone who has contributed to this thesis.

First of all, I would like to express my deep thanks to my supervisor Prof. dr. Gerrit J. Poelarends. Gerrit, thank you for providing me the valuable opportunity to study under your supervision and supporting me all the way since the beginning. I have learnt a lot from your guidance, not only knowledge wise, but also regarding how to perform solid scientific research, planning and managing projects, presenting, writing, etc. I’m always impressed that you remember every one’s project so well, even the details, and how you respond quickly to the students’ request with clear guidance. I appreciate your constant enthusiasm on science and your optimistic attitude towards both work and life, which have inspired me a lot.

I would like to thank my second supervisor Prof. dr. Wim J. Quax for all your support, discussions, and nice conversations. You are kind and supportive, and I have gained a great deal of knowledge regarding the Dutch culture and the university from the nice talking with you. Thanks for translating the Dutch Summary for this thesis and all the other helps. My sincere thanks to Prof. dr. Frank J. Dekker, Prof. dr. Hidde J. Haisma and Dr. Ykelien L. Boersma for kind comments and suggestions in group seminars and all the other supports.

I would also like to thank the members of the assessment committee, Prof. dr. W.J.H. van Berkel, Prof. dr. M.J.E.C. van der Maarel and Prof. dr. M.W. Fraaije for accepting to evaluate and comment on my thesis.

My sincere thanks to Dr. Andy-Mark W.H. Thunnissen for the nice collaborations on crystallization and molecular docking of EDDS lyase and all the insightful discussions.

I always feel fortunate to spend PhD time in the Department of Chemical and Pharmaceutical Biology, which is always open, friendly and supporting. I’m glad I met so many interesting and enthusiastic people here. You constitute a large part of my PhD life and enrich it. Many thanks to our friendly and helpful technicians, Pieter, Rita and Ronald. Pieter, we spent many time together during work at the beginning of my study, from which I learnt a lot of knowledge and skills on organic and analytical chemistry. This means a great deal to me, who came from biochemistry background and was expected to work with chemical synthesis mostly. Thanks for helping me synthesize almost all the references and other compounds. In our various casual talking, I’m amazed by your super passion about wild life and nature. It’s
Acknowledgement

really interesting to hear you talk about all the bird watching, frogs in the garden, spiders in the Netherlands and so on. **Rita**, you are kind, easy-going and seems like always ready to offer you help. You are good at coming up with fun ideas and realizing them into nice activities. We talked a lot in the last several months and I’m glad to know we share many experiences. Thank you for bringing so many joys to my PhD life and offering your support and encouragement. **Ronald**, thank you for helping me with many lab issues and technical problems. I’m glad that you like my idea and took over the project of elucidating the biodegradation of EDDS. I enjoyed and gained a lot in our short collaboration and finger crossed for its success. My warm thanks to **Janita** and **Yvonne**, for your patient explanations about many complex issues, helping with paper works and other office affairs and all nice conversations.

I would like to take this moment to thank my nice colleagues from Gerrit’s group. Let me start with my office mates in room 905. **Haigen** and **Lieuwe**, thanks for accepting to be my paramnfs for defense affairs. **Haigen**, we have formed a nice team collaborating on exploring the biocatalytic applications of EDDS lyase and MAL, and published a series of papers with shared authorship. You have many good qualities as a creative and independent researcher and showed me many times things could be viewed and solved in a different way. I have learnt a lot from our collaborations, which I’m very grateful. Thank you and **Xiaoxuan** for inviting me for dinner/lunch during study and I’m really happy I met both of you in Groningen. **Lieuwe**, thanks for various scientific discussions and kind help with molecular biology when I started enzyme engineering. You really know a broad range of knowledge and it is always interesting to talk with you. It was quite impressive to know you can play organ (I looked up organ in Chinese dictionary after our talk) and listening to the organ concert with you and Pieter during BioTrans in Budapest is a good memory for me.

**Saravanan**, you are very kind, generous and supportive. Thank you for the assistance in editing two recent manuscripts and suggestions for research and career. Also, I enjoyed the nice conversations with you (scientifically and non-scientifically), especially those interesting stories and facts about India. **Saif**, thanks for the good collaborations on EDDS lyase, insightful discussions and help in the lab. Hope you keep your positive and optimistic attitude always. **Chao**, thanks for being such a lively person in the office and bring us a lot of joy. Also, thanks for the driving service to Den Haag and various other helps. **Zainal** and **Tjie**, we started our PhD in the same year. Thanks for all nice conversations and the tasty Indonesian food.

Many thanks to the **new 4-OT Trio**, **Andreas**, **Michele**, **Guangcai**. I feel quite impressive about your enthusiastic and extremely harmony discussions over various topics about 4-OT. Thanks for building a nice atmosphere in the office and lab. I have benefited a lot from you guys through different kinds of discussions and suggestions on EDDS lyase.

Lovely **Marie** and **Ele**, before you came, I had been the only girl in the group (on the 9th floor) for a long time. I enjoyed a lot talking with you girls and I like the nice activities you
organized. And for Ele, thanks for the nice collaborations on structural studies of EDDS lyase mutant and various discussions. I wish you and Francesco all the best for the arriving of the baby. Many thanks to Shanshan and Laura for all the nice conversations. Shanshan, you are kind and understanding, knowing so many little wisdoms of life. Thanks for all the nice suggestions you gave me and the delicious food you cook. I enjoyed your company a lot and hope you keep the curiosity and passion for life always. Yan, though we were colleagues for not a long time, you showed how to maintain productivity in work while being a young mother. Thanks for all the scientific or non-scientific conversations.

My best wishes for our new PhD students Faizan (wish you to be a very lucky successor on EDDS lyase), Fabiola (I like the quote from Madam Curie you wrote on my farewell card so much that I used it as one of the propositions. Many thanks for that) and Alex (enjoy the nitro reductase and be good with my old lab bench:)), for a success in your research and PhD study. I’m glad to meet you in the last year in Groningen.

I would also like to thank the “old boys” in the room 905, Harsh, Sabry, Yufeng, Jan Ytzen, and Meran, for various discussions and all the helps in the lab in my first two years. Special thanks to Harsh and Sabry for supporting me to start with experiments on MAL and EDDS lyase. Hans, though you already left when I joined the group, thank you for the insightful suggestions that I received from emails and in other occasions.

Many thanks to my students who contributed to this thesis, Gea, Harmen, Maike, and Enes. Being your supervisors is a mutual learning process, through which I enjoyed and gained a lot. Laura, thank you for contributing to the completion of the core table in Chapter 5 and all the interesting conversations.

Besides, I would like to thank other colleagues and friends from the 9th floor. Magda and Putri, I admire your multiple talents and passions about life. Those times we spent together, the dinners, (Ghibli) movie nights, outgoings, karaoke, and various other things are so joyful that I will cherish for long. Thanks for inviting me to your living room concerts, twice, which were such an amazement. It’s always nice to talk with you girls sharing those good or not-so-good time in life. Dear Baojie (Brenda), this year is the 9th year we have known each other. I’m grateful that when we know each other more and more, we keep improving understandings and acceptance. Thanks for your support and encouragement all these years. You are always that strong, independent and romantic girl. I wish you, Xiaodong and Louia a very happy and fulfilling life. Yizhou, thanks for being such a strong support for me during the last stage of my PhD. In my eyes, you are gentle, smart and always ready to offer your help. I like the way you always try to improve your understandings for others and for the world. Lastly, my big warm thanks to other Jinhua girls, Jane, Yafeng, Xinyu and Dan for all the nice gatherings, conversations, help and company.

My sincere thanks to Robbert (special thanks for your assistance with Acta and all the nice conversations. You act always like a gentlemen), Christel, Abel, Ingy, Linda, Jan, Joko and
Acknowledgement

**Hagar** for your help in the lab, nice discussions and conversations. I enjoyed all the dinner/lunch, outings, seminars with you, and the nice environment you help create on the 9th floor of CPB.

I would also like to take this opportunity to thank other colleagues from CPB and GRIP, **Hao, Bin, Olivia, Martijn, Hannah, Thea, Nikolaos, Maria-Eleni, Roberta, Fangyuan, Zhangping, Siwei, Deng (Chen), Petra, Andre, Eman, Ting (Zhao), Nia**, for help and support in the lab and various discussions. I enjoyed the time with you and thanks for the nice atmosphere.

Outside the working life, I have been surrounded by many interesting and lively Chinese friends, whom I want to offer my sincere thanks to. **Su and Xu**, I always feel so lucky to meet you girls in Groningen. We share so many similar interests and perspectives that I always feel I can be myself when staying with you. All the time we spent together, traveling around Europe, cooking in the weekend, watching movies/TV series, wandering on the street, are precious moments to remember in life. **Su**, thanks for all the help from you and **Naqin**, as well as patient listening and encouragement. Congratulations on the new-born baby (it’s a little pity we missed to have a same birthday) and wish your family all the happiness. **Xu**, you are a lovely and passionate “young lady” with a bunch of interesting ideas. You are also a very good listener and I enjoyed various talking between us. I’m impressed by you bravely stepping out of academic path to chase the things you truly like. Thanks for all the joyful time together, support and inspirations.

**Zhenchen, Huatang, Xiaodong, Xiaoming**, you and **Baojie** and me started this exciting journey in the Netherlands together on the same day. I’m glad to know you at the very beginning of my study and have maintained close friendship since then. Thank you for all the nice conversations (about work and life), the joyful gatherings and traveling together. Let’s keep in touch and wish you all the best for future.

Big thanks to my other Chinese friends in Groningen, **Jiaying & Jing (Sun), Yuanze & Jingjing, Ji (Zhang), Liqiang & Yuanyuan, Chengcheng, Yanan, Cong (Duan), Hongyan, Chao (Ma), Yifei & Yihui, Keni, Kai (Gao), Yana, Yu (Tian), Lin (Zhou), Jing (Li), Yixuang, Shiling, Yehan, Huala, Gaowa**. It’s so nice to meet you in Groningen. Thank you for all the nice conversations and making my stay in Groningen lively and colorful.

Last but not the least, I want to thank my family and relatives for constant support and encouragement. **Dad and Mom**, I know you are learning English, so it takes no effort of me to decide to write this part in English. Time to check your level! Anyway, thank you for years of support, love and motivations. Without your support, I know I can’t reach where I’m standing today. Thanks for all the understandings when I’m far away from home. I wish the health and happiness will be with you and I love you forever!
