Molecular composition and function of the spiral ganglion neuron peripheral synapse in mice

Daniël Onne Jilt Reijntjes

Experiments for this thesis were performed in collaboration with the university of Groningen, the University Medical Center Groningen, and the BCN graduate school.

This research was supported by the Heinsius-Houbolt fund and the foundation for the hearing impaired child.

Molecular composition and function of the spiral ganglion neuron peripheral synapse in mice

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Monday 9 September 2019 at 11.00 hours

by

Daniël Onne Jilt Reijntjes

born on the 10th of June 1990
in Groningen

Supervisor

Prof. P. van Dijk

Co-supervisor

Dr. S. J. Pyott

Assessment Committee

Prof. J. C. Billeter

Prof. J. M. J. Kremer

Prof. K. P. Steel

Table of contents

1 Introduction

Preface	2
1.1. The perception of sound	3
1.2. Anatomy of the auditory system	4
1.2.1. The peripheral auditory system	5
1.2.2. The sensory hair cells	8
1.2.3. The spiral ganglion neurons	12
1.2.4. The central auditory system	13
1.3. Acquired hearing loss	16
1.4. Molecular composition and function of the spiral ganglion neuron peripheral synapse	18
1.5. This thesis	18

2 The afferent signaling complex 21

2.1. Overview	22
2.2. Glutamate receptors and the postsynaptic density	24
2.2.1. AMPA receptors	24
2.2.2. Kainate receptors	25
2.2.3. NMDA receptors	26
2.2.4. Metabotropic glutamate receptors	29
2.2.5. The postsynaptic density	30
2.3. Glutamate uptake by neighboring supporting cells	31
2.4. Voltage-gated ion channels and ion transporters	32
2.4.1. Voltage-gated sodium channels	32
2.4.2. Voltage-gated potassium channels	34
2.4.3. HCN channels	36
2.4.4. Other voltage-gated ion channels and ion transporters	36
2.5. Lateral efferent innervation of the type I spiral ganglion neurons	38
2.5.1. Acetylcholine	39
2.5.2. Dopamine	40
2.5.3. GABA	42
2.6. The afferent signaling complex	45
2.6.1. Glutamatergic signalling	45
2.6.2. Voltage-gated ion channels	49
2.6.3. Lateral efferent innervations	50

2.7. Conclusion	51
3 $K_{Na}1$ channels shape peripheral auditory function	53
Abstract	54
3.1. Introduction	54
3.2. Materials & Methods	56
3.2.1. Animals	56
3.2.2. RNA isolation and sequence analysis	56
3.2.3. Single molecule fluorescence <i>in situ</i> hybridization (smFISH) with RNAscope	57
3.2.4. Measurement of auditory brainstem responses	58
3.2.5. Histological assessment of the cochlear morphology	59
3.2.6. Immunofluorescence, confocal microscopy and image analysis of isolated auditory sensory epithelia	59
3.2.7. Patch clamp electrophysiology of isolated spiral ganglion neurons	60
3.3. Results	61
3.3.1. SLO channel transcripts encoding $K_{Na}1$ channels are expressed in the intact sensorineural structures and specifically spiral gan- glion neurons	61
3.3.2. $K_{Na}1$ DKO mice have normal ABR thresholds but reduced wave I amplitudes	64
3.3.3. Cochlear morphology, spiral ganglion cell density, and architec- ture of the afferent synapses are normal in $K_{Na}1$ DKO mice . . .	68
3.3.4. Spiral ganglion neurons isolated from $K_{Na}1$ DKO mice do not have Na^+ -sensitive outward K^+ currents and display altered action potential waveforms	71
3.4. Discussion	76
4 Acquired hearing loss in $K_{Na}1$ knockout mice	81
Abstract	82
4.1. Introduction	82
4.2. Materials & Methods	83
4.2.1. Animals	84
4.2.2. Auditory brainstem responses	84
4.2.3. Noise exposure	84
4.2.4. Inner ear dissection and immunohistochemistry	85
4.2.5. Image acquisition and analysis	85
4.2.6. Statistics	85
4.3. Results	86
4.3.1. ABR wave I threshold responses in ageing $K_{Na}1$ DKO mice . . .	86
4.3.2. Outer hair cell survival in ageing mice	86
4.3.3. ABR wave I amplitude slopes in ageing $K_{Na}1$ DKO mice	87
4.3.4. ABR wave I latency slopes in ageing $K_{Na}1$ DKO mice	90
4.3.5. Inner hair cell-spiral ganglion neuron synapse survival in $K_{Na}1$ DKO mice	90

4.3.6. ABR wave I threshold responses in $K_{Na}1$ DKO mice after noise exposure	91
4.3.7. Wave I amplitude slopes in $K_{Na}1$ DKO mice after noise exposure	93
4.3.8. Wave I latency slopes in $K_{Na}1$ DKO and WT mice after noise exposure	95
4.3.9. Synapse survival in $K_{Na}1$ DKO mice after noise exposure	96
4.4. Discussion	97
4.4.1. Development of age-related and noise-induced hearing loss in $K_{Na}1$ DKO mice	97
4.4.2. Mechanisms underlying increased vulnerability of $K_{Na}1$ DKO mice to development of age-related hearing loss and noise-induced hearing loss	100
5 Volume gradients of synaptic proteins	103
Abstract	104
5.1. Introduction	104
5.2. Materials & Methods	107
5.2.1. Animals	107
5.2.2. Immunohistochemistry	107
5.2.3. Image acquisition and processing	109
5.2.4. Volume quantification of pre- and postsynaptic proteins	109
5.2.5. Data transformation and pillar-modiolar classification of synapses	110
5.2.6. Statistics	111
5.3. Results	111
5.3.1. Pillar- and modiolar volume gradients in CBA/CaJ mice	111
5.3.2. Volume gradients at the level of individual synapses in CBA/CaJ mice	113
5.3.3. Pillar- and modiolar volume gradients in C57BL/6, and FVB/NJ mice	115
5.3.4. Volume gradients at the synaptic level in C57BL/6 and FVB/NJ mice	117
5.3.5. Volume gradients in postsynaptic density proteins in C57BL/6, and FVB/NJ mice	117
5.3.6. Volume gradients in postsynaptic density proteins at the synaptic level in C57BL/6, and FVB/NJ mice	119
5.4. Discussion	121
5.4.1. Opposing vs. concurrent synaptic volume gradients in mice	122
5.4.2. Opposing vs. concurrent synaptic volume gradients in mammals	124
5.4.3. Implications	125
6 General discussion	125
6.1. Molecular architecture and molecular processes of the SGN	126
6.2. Novel protein expression and function	126
6.3. Spiral ganglion neuron subgroup detection	129
6.4. Conclusions	130
6.6. Future outlook	131

7. Summary	135
8. Nederlandse samenvatting	136
9. Acknowledgements	139
10. Cited references	141
11. Bibliography	171
