lembaga pengelola dana pendidikan

The research presented in this thesis was performed in the research group of Device Physics of Complex Materials of the Zernike Institute for Advanced Materials at the University of Groningen, The Netherlands. Abdurrahman Ali El Yumin received a PhD scholarship from Lembaga Pengelola Dana Pendidikan (Indonesia Endowment Fund for Education), Ministry of Finance, Republic of Indonesia.

2D Materials and Interfaces in High-Carrier Density Regime

A Study on Optoelectronics and Superconductivity

Phd Thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Friday 30 August 2019 at 16.15 hours

by

Abdurrahman Ali El Yumin

born on 8 December 1989
in Jakarta, Indonesië

Supervisors

Prof. J. Ye

Prof. M.A. Loi

Assessment Committee

Prof. P. Rudolf

Prof. U. Zeitler

Prof. K. Kobayashi

Table of Contents

Chapter 1. Introduction	9
1.1 Transition Metal Dichalcogenides	11
1.2 p - n Junction Based on 2D Materials	16
1.3 Heterostructures p - n Junction	18
1.4 Homostructures p - n Junction	20
1.5 Superconducting Gap in Field Induced 2D Materials	22
1.6 Motivation and Outline of The Thesis	27
References	30
Chapter 2. Planar p-n Junction Based on a TMDs/Boron Nitride Heterostructure	35
2.1 Introduction	37
2.2 Device Fabrication Method	38
2.3 Results and Discussion	40
2.4 Conclusion	49
References	50
Chapter 3. Strong Electroluminescence From a Sharp Field Induced p-n Junction	53
3.1 Introduction	55
3.2 Experimental Method	57
3.3 Results and Discussion	59
3.3.1 Electroluminescence of The Lateral Monolayer WS_2 p - n Junction Device	59
3.3.2 Back Gate and Temperature Dependence of Diode Rectification Behavior	61
3.3.3 Spectral Analysis of Electroluminescence	65
3.4 Conclusion	70
References	72

Chapter 4. Study of Superconducting Gap: Tunneling Spectroscopy in Ionic-liquid Gated Few-layers MoS₂	75
4.1 Introduction	77
4.2 Device Fabrication	79
4.3 Results and Discussion	79
4.3.1 Gate Tunable Critical Temperature and Carrier Density	79
4.3.2 Tunneling Spectroscopy of Superconductivity Gap	82
4.3.3 Determination of Electron-phonon Coupling Constant	89
4.4 Conclusion	93
References	94
Chapter 5 Development of A Vacuum 2D Heterostructure Fabrication Platform: Towards High-quality 2D Heterostructure Devices	97
5.1 Introduction	99
5.2 Vacuum Transfer Procedure	99
5.3 Low-temperature optical measurement	104
5.4 Electrostatic Tunable Excitonic State in Encapsulated WS ₂	112
References	116
Summary	119
Samenvatting	123
Acknowledgement	127
List of Publications	131
