Reversible Conductance and Surface Polarity Switching with Synthetic Molecular Switches

Sumit Kumar

Reversible Conductance and Surface Polarity Switching with Synthetic Molecular Switches

Sumit Kumar
University of Groningen, Netherlands

Zernike Institute for Advanced Materials PhD series 2019-24

ISSN: 1570-1530

ISBN: 978-94-034-1868-1 (printed)

978-94-034-1867-4 (electronic)

This project was carried out in the research group "Surface and Thin Films" of the Zernike Institute for Advanced Materials of the University of Groningen and supported by the Advanced Materials research program of the Zernike National Research Centre under the Bonus Incentive Scheme of the Dutch Ministry for Education, Culture and Science. The author benefited from the Svāgata 2013 Erasmus Mundus fellowship and was financially supported by the University of Groningen.

Printed by: Gildeprint - Enschede

Front & Back: The cover art was designed by Sumit Kumar and Saurabh Soni, shows artistic representations of a molecular punch card device encoded the ASCII character 'rcclab', a self-assembled monolayer and formation of an EGaIn tip (photos procured by Davide Fracasso).

Reversible Conductance and Surface Polarity Switching with Synthetic Molecular Switches

PhD Thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Friday 27 September 2019 at 9.00 hours

by

Sumit Kumar

born on 16 July 1980
in Dhanbad, India

Supervisors

Prof. P. Rudolf

Prof. R.C. Chiechi

Assessment Committee

Prof. B. J. van Wees

Prof. H.J.W. Zandvliet

Prof. D. Dulic

*"To Late Sri B.N Prasad & Smt. Kishori Devi,
my beloved parents, brother and wife."*

CONTENTS

1	Introduction	1
1.1	Molecular machines (design and development).	2
1.1.1	Molecular Switches 1 : Spiropyrans	3
1.1.2	Molecular switches 2 : A switchable host-guest system based on cucurbit[8]uril	4
1.2	Molecular electronics	5
1.2.1	Large area junction	6
1.2.2	Eutectic gallium indium (EGaIn) soft contact	6
1.2.3	Mechanism of charge transport	8
1.3	Thesis outline.	8
	Bibliography	10
2	EXPERIMENTAL TECHNIQUES	15
2.1	Sample preparation.	16
2.1.1	Substrate preparation	17
2.1.2	Preparation of self-assembled monolayers.	17
2.2	Fabrication of non volatile memory devices.	19
2.2.1	Patterned gold electrode	21
2.2.2	PDMS punchcard fabrication	22
2.2.3	READ/WRITE/LOCK/UNLOCK Procedures	22
2.3	Characterization techniques	23
2.3.1	Conductance measurements of SAMs on template-stripped Au substrates	23
2.3.2	X-ray photoelectron spectroscopy	24
2.3.3	Contact angle measurement	26
	Bibliography	28
3	Spiropyran Switches in Molecular Tunneling Junctions	29
3.1	Introduction	30
3.2	Results and Discussion	31
3.2.1	Formation of self-assembled monolayers	31
3.2.2	Conductance switching	33
3.2.3	Mechanism of switching	39
3.3	Conclusions.	43
	Bibliography	45

4	Chemical Locking in Molecular Tunneling Junctions Enables Non-volatile Memory	51
4.1	Introduction	52
4.2	Results and Discussion	53
4.2.1	X-Ray Photoelectron Spectroscopy.	53
4.2.2	Electrical Measurements.	56
4.2.3	Soft Punch Card Devices	58
4.2.4	Encoding and Decoding	59
4.2.5	Statistical analysis of signal output.	61
4.3	Conclusions.	62
	Bibliography	63
5	Disulfide molecules in Molecular Tunneling Junctions	67
5.1	Introduction	68
5.2	Results and discussion	69
5.2.1	XPS and Contact Angle Measurement	70
