Folding and Replication in Complex Dynamic Molecular Networks

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. C. Wijmenga
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on

Tuesday 29 October 2019 at 12.45 hours

by

Bin Liu

born on 22 July 1988
in Chongqing, China

Supervisors

Prof. S. Otto
Prof. G. Roelfes

Assessment Committee

Prof. G. Guichard
Prof. L. Brunsveld
Prof. W. Browne

Contents

Chapter 1 Folding and Replication in Complex Chemical Systems	1
1.1 Systems chemistry and the <i>de-novo</i> synthesis of life.....	2
1.2 Synthetic folded structures - foldamers	4
1.2.1 Aliphatic peptide foldamers	4
1.2.2 Aromatic foldamers.....	6
1.2.3 Aliphatic and aromatic hybrid foldamers.....	8
1.3 Synthetic self-replicating systems	8
1.3.1 DNA-based self-replicating systems	10
1.3.2 RNA-based self-replicating systems	11
1.3.3 Peptide-based self-replicating systems.....	12
1.3.4. Non-biological self-replicating systems.....	13
1.4 Dynamic combinatorial chemistry.....	15
1.4.1 Folding in DCLs	16
1.4.2 Emergence of self-replicators from DCLs	18
1.5 Aim and outline	21
1.6 References.....	23
Chapter 2 Complex Molecules that Fold like Proteins Can Emerge Spontaneously	27
2.1 Introduction.....	28
2.2 Results and discussion	29
2.2.1 Design and synthesis of building blocks	29
2.2.2 Formation of complex folded structures from DCLs	29
2.2.3 Structure characterization of foldamer.....	31
2.2.4 Unfolding and refolding.....	34
2.2.5 Building block modification	35
2.3. Conclusion	36
2.4. Experimental section	37
2.4.1 General methods.....	37
2.4.2 Synthesis and characterization of building blocks	39
2.7 References.....	59
Chapter 3 Dynamic Combinatorial Foldamers	61
3.1 Introduction.....	62
3.2 Results and Discussion	63

3.2.1 Design and synthesis of building blocks	63
3.2.2 Emergence of complex peptide foldamers	64
3.2.3 Characterization of the foldamers	65
3.2.4 Unfolding and refolding of the foldamers.....	70
3.2.5 Effect of the solvent environment on the formation of foldamers	72
3.3 Conclusions.....	72
3.4. Acknowledgements	73
3.5. Experimental section	74
3.5.1 General methods.....	74
3.5.2 Synthesis and characterization of building blocks	76
3.6 References.....	100
Chapter 4 Dynamic Peptide Nucleic Acid Self-Replicators	103
4.1. Introduction.....	104
4.2. Results and discussion.....	106
4.2.1. Emergence of nucleobase-peptide self-replicators	106
4.2.2. Cross-catalysis between nucleobase containing self-replicators.....	111
4.2.3. Importance of the nucleobase	114
4.3. Emergence of PNAs based replicators	115
4.3.1 Emergence of amino acid functionalized PNA replicators.....	115
4.3.2 Cation-introduced guanine based supramolecular assembly.....	118
4.4. Conclusion	119
4.5. Acknowledgements	119
4.6. Experimental section.....	120
4.6.1 General methods.....	120
4.6.2 Synthesis and characterization of building blocks	123
4.6.3 Appendix.....	131
4.6.4 UPLC and UPLC-MS analysis	135
4.9 References.....	188
Chapter 5 Self-replication Promotes the Formation of Complex Folded Structures.....	189
5.1 Introduction.....	190
5.2 Results and discussion	191
5.2.1 Self-sorting of a self-replicator and a foldamer	191
5.2.3 Ratio effects.....	195
5.2.4 Transient self-replication.....	197

5.3 Conclusion	199
5.4. Experimental section	200
5.4.1 General methods	200
5.4.2 Appendix.....	202
5.4.2 UPLC and UPLC-MS Analyses.....	206
5.5 References	212
Chapter 6 Overview and Perspectives	215
6.1 Overview.....	215
6.2 Perspectives.....	216
Summary	219
Samenvatting	223
Acknowledgements	227
